KXZ system is the best air conditioning solution for "Sophisticated" buildings

KXZ VRF series delivers high cooling/heating performance for all commercial applications.

High efficiency & comfort

- High energy efficiency with advanced technology
- Energy saving control by VTCC (Variable Temperature & Capacity Control)
- Individual, centralised and customised comfort control

Design flexibility

- Various types of indoor units suiting all applications
- Long piping length and wide limitation of piping
- Easy selection and design software

Easy & customised control

- Individual advanced control by wired and wireless remote controller
- Various options for BMS & centralised controller

Good serviceability

- Easy access for maintenance
- Engineering and monitoring tool available

"Micro KXZ series" for small offices, shops and residential applications

Energy efficient and highly reliable industry leading compact units are designed and built by our technology experts.

Heat pump systems

The heat pump systems operate with 2 inter-connecting pipes, and are commonly referred to as a '2-pipe systems'.

These systems provide either a heating or cooling operation to all indoor units at the same time and are suitable for a wide range of applications from an apartment or villa to an entire multi-story building, especially when there are significant open plan areas to be controlled.

The range starts with a 12.1kW cooling capacity, up to 20HP with 56.0kW cooling capacity. Outdoor units can also be "twinned" or "tripled" providing up to 60HP/168.0kW on a single system.

The range has a total piping length of 1000m (KXZ) and the furthest indoor unit can be connected up to 160m (KXZ) from the outdoor unit.

Specific cases of VRF system installation from Mitsubishi Heavy Industries Thermal Systems

Case study: Hotel and Leisure

The VRF heat recovery systems from Mitsubishi Heavy Industries (MHI) Thermal Systems KX range match the demanding needs and specifications for luxury hotels and 'airport style' bus stations. MHI Thermal VRF systems feature advanced inverter technology that adjusts compressor output to match the cooling or heating demands of the indoor units. Allowing to save energy and easily control room temperature by choosing to heat or cool in different areas. Our adaptable system allows to increase the heat in sunnier, south facing rooms; all while providing energy for rooms in cooler, shadier sides of your building.

Case study: Education

We're proud to have provided Crossways Academy in Lewisham with a VRF system with inverter control - helping to make school a cooler place to learn.

Comfortable temperatures need to be maintained as economically as possible in rooms where large numbers of students will enter or leave at the same time. IT equipment being switched on and off and the use of electric blinds to control glare will all contribute to substantial fluctuations in heat load. A VRF KX system from Mitsubishi Heavy Industries Thermal Systems provides an ideal solution. Much of the building was designed to rely on natural ventilation, with windows operated electronically. The air conditioning system is linked to this control system to close down when windows are opened. Mitsubishi Heavy Industries Thermal Systems KX is particularly appropriate for many such retrofit applications.

Next Generation Refrigerant R32

New indoor units and outdoor units line up are available for R32 refrigerant

FDT

FDTC

FDK

FDU

FDUM

FDUT

F-GAS REGULATION (EU) No 517/2014

Introduced in January 2015 to regulate the use of Fluorinated Greenhouse Gases (F-Gases)

The Hydrofluorocarbons (HFCs) are F-Gases used in the HVACR sector (Heating, Ventilation, Air Conditioning and Refrigeration)

OBJECTIVE

To protect the environment by reducing the F-Gases emissions

IMPACT ON HFCs(in EU)

HFCs Phase Down

HFCs Ban

SOLUTIONS

- Use lower GWP* refrigerants in new equipment
- Use high-efficiency equipment with less refrigerant charge
- Check refrigerant leaks regularly

* GWP is the Global Warming Potential of a refrigerant, representing how much heat an F-Gas traps in the atmosphere

HFCs Ban

2020

GWP ≥ 150

Portable room air conditioner

GWP ≥ 2500

Stationary refrigeration^{*1} (except < -50°C)

GWP ≥ 2500

Commercial hermetically sealed refrigerators, freezers

2022

GWP ≥ 150

Commercial multipack centralised refrigeration

GWP ≥ 150

Commercial hermetically sealed refrigerators, freezers

2025

GWP ≥ 750

Single Split Fixed Air Conditioning < 3kg HFC

^{*1} Stationary refrigeration equipment, that contains or relies its functions upon, HFCs with GWP of 2500 or more except equipment intended for application designed to cool products to temperatures below -50°C application

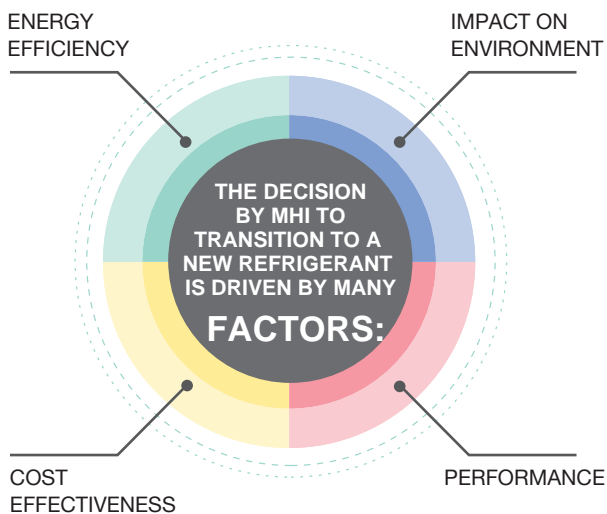

$$\text{LOWER GWP} + \text{LESS REFRIGERANT CHARGE} = \text{LOWER HFCs EMISSIONS}$$

R32 - A Low GWP Refrigerant

- A single component, easy to handle refrigerant
- Known as a component of the blend R410A(50% R32, 50% R125)
- Already used in Air Conditioning systems worldwide
- Zero Ozone Depletion
- Superior Energy Efficiency vs. R410A
- Reduced refrigerant charge vs. R410A
- Easy to recycle

Micro KXZ Heat pump systems
4, 5, 6HP (12.1kW ~ 15.5kW)

Low Global Warming Potential

1/3 GWP VS. R410A

Improved Energy Efficiency

Energy Efficiency Ratio Based on 12.1kW MicroKXZ Outdoor unit.

Reduced Refrigerant Charge

Saving up to 16%

New Generation

New Design

The new KXZ2 series has a layered design and a refined new form. The flexibility in design and ease of installation are further enhanced to provide optimum response to medium and large building airconditioning systems.

Indoor Unit Capacity Connection

Increased number of connectable units and max capacity connection (compared to KXZE1)

Connectable indoor units														
HP	10	12	14	16	17	18	20	22	24	26	28	30	32	34
Numbers	37	44	53	60	50	53	59	65	71	78	80	80	80	80
HP	36	38	40	42	44	46	48	50	52	54	56	58	60	
Numbers	80	80	80	80	80	80	80	80	80	80	80	80	80	

Long Pipe Length

The maximum height difference between indoor units has been increased to a maximum of 30m, and the maximum height difference between the outdoor unit and indoor unit has been expanded to 90m. For with few limitations, contributes to system design flexibility.

*1 The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m. (MAX85m)

*2 It is necessary to change the setting corresponding to each height difference in installation. The range of use is also different.

Technology

Continuous Heating Capacity Control (CHCC)

Our CHCC defrosting control has been added to our KXZ2 system and allows to achieve greater capacities than that of our previous model in low ambient temperature conditions. CHCC controls the target pressure automatically before the capacity drops, which increases the period of heating operation and reduces the systems defrosting time.

Variable Temperature and Capacity Control

VTCC adjusts the target pressure of the refrigerant cycle in the outdoor unit automatically according to the demand of the indoor units in partial load conditions. These smooth adjustments ensure optimal usage of the indoor units as well as maximised energy savings. Ultimately this also increases comfort for the user.

VTCC

*34% energy savings are based on comparison with a KXZ standard model with VTCC vs. a KXZ standard model both under partial load condition.

Extended external static pressure

50Pa to Max **85Pa**

Flexibility to meet installation location needs.

New Generation FDTC

European design & Flat panel

Ceiling Cassette Compact FDTC

- More comfort and Higher energy savings
- New European Design
- Lower noise

A' Design Award and Competition is the World's largest, most prestigious and influential design accolade, the highest achievement in design. A' Design Award Winner Logo, symbolizes exceptional design excellence in products, projects and services.

Thin Panel

FDTC thin panel fit within 10mm from the ceiling.

Unique Grille Design

Honeycomb grille

Draft Prevention Panel (Option)

Please refer to page 18

Motion Sensor (Option)

Please refer to page 16-17

Big Louver

Improved distribution

- It is available to set draft prevention panel and motion sensor as well as FDT.

Compact Design

700mm → 620mm

The weight is 14kg

Height of thin panel and main body is 248mm allowing adequate spacing for installation.

Integrated ceiling system design 600x600

Quieter operation

Adopting new turbo fan and improving new heat exchanger enables noise reduction. (Sound pressure level in the Lo mode.)

FDT colour variation

Now available in shadow black

*Blend in,
or **stand out.***

Shadow black

Fine snow white

Motion sensor (Option)

Energy saving operation by detecting human movement

Optional for the following models

FDT

FDTC

FDTW

FDTS

FDU

3 Step Control

1 Power Control

New motion sensor (option) detects human activity. Energy saving control is achieved by shifting set temperature according to detected amount of activity.

2 Stand by

Unit will go on stand-by mode when no activity is detected. When the motion sensor detects activity again, the unit will automatically re-start operation.

3 Auto Off

Unit will go off automatically when no activity is detected for 12 hours.

Low human activity (in cooling)

High human activity (in cooling)

Absence for 1 hour

12 hours absence

Operation mode and Control of Motion sensor

eco operation		comfort operation		Operation mode				
				Auto	Cool	Heat	Dry	Fan
Power Control *1		Low	<div>Cooling +3°C</div> <div>Heating +3°C</div>	+3°C	+3°C	-	-	
		High	<div>Cooling -3°C</div> <div>Heating -3°C</div>	-3°C	-3°C	-	-	
		None	<div>Cooling +3°C</div> <div>Heating -3°C</div>	+3°C	-3°C	-	-	
Auto Off *2				●	●	●	●	●

*1 Set temperature is revised maximum $\pm 3^{\circ}\text{C}$ at Cooling/Heating mode by detecting heat volume movement.

*2 Absence for 1 hour \Rightarrow Operation stops ("Stand-by") 12 hours absence \Rightarrow Operation stops completely

Draft Prevention Panel (Option)

Keep maximum comfort with minimal draft : FDT & FDTC control flaps with more flexibility.

- New flexible function in the market - Flexible flap control for draft prevention

Each of the 4 flaps can be controlled individually at each operation mode. They change air flow direction and prevent drafts occurring. This function also provides flexible control for air flow direction.

User can position Draft Prevention Panel panels by using only the remote controller (RC-EX3A, Wireless kit).

- It can also prevent user from being directly blown by hot drafts in heating mode.

Draft Prevention Panel off

Draft Prevention Panel working*

Draft Prevention Panel provides a comfortable airflow without any draft feeling. Whether cooling or heating a room, the remote control can be used to instantly suppress any warm or cool drafts. This accurately assists how air flow is directed out of the indoor unit.

* Image is for illustration purposes

Ceiling cassette
FDT

The Good Design Award is Japan's only comprehensive design evaluation and recommendation initiative, originating with the "Good Design Products Selection System" founded in 1957. It is now a global design award with participation from numerous Japanese and international companies and organizations. The "G Mark", the symbol of the Good Design Award, is known widely as a symbol of excellent design. (FDT)

Remote Control

Simple use with advanced settings REMOTE CONTROL

RC-EX3A

Intuitive touch controller with Liquid Crystal Display

Function Switch

The function switch allows you to select and set two functions of your choice among the seven available functions shown. These functions can be used by simply pressing the button after they are set, allowing you to use your preferable functions immediately.

1. Draft prevention ON/OFF

Anti draft can be turned ON/OFF with a single tap of the button.

2. High Power Mode

High Power Mode achieve excessive cooling / heating capacity in 15 minutes to quickly adjust the room temperature to a comfortable level.

3. Energy Saving Mode

Temperature is set to be optimized to save energy without losing comfort.

4. Quiet Mode

Outdoor unit starts to operate quietly by activating this mode. The time of this mode can be set in conjunction with Indoor Silent Timer.

5. Home Leave Mode

Home leave mode maintains the room temperature at a moderate level.

6. Favourite Mode

Operation mode, set temperature, fan speed and air flow direction will automatically be adjusted to the programmed favorite setting.

7. Filter Sign

Announces the due time for cleaning the air filter.

Favourite Mode

Operation mode, set temperature, fan speed and air flow direction are memorized and allocated to two buttons that can be operated by one touch.

Adjustable Brightness of the Operation Lamp

The brightness of the operation lamp behind Run/Stop switch can be adjusted by 10 stages.

Draft Prevention Setting

(only for FDT•FDTC series)

User can enable/disable the motion of Draft prevention panel for each blow outlet for each operation mode. This function can be set while operating.

Easy Adjustment of the Air Flow

User can visually confirm and set the direction of flaps using the visual display on the remote controller.

Motion Sensor Control

Presence of humans and activity are detected by a motion sensor to perform various controls.

1 Select Enable / Disable Motion sensor control

Enable/Disable

Select **Enable** / **Disable** for the motion sensor of the indoor unit connected to the R/C.

2 Select Enable / Disable per control

- Power control
- Auto-off

Enable/Disable

Backup Control

Control restricted to two indoor units (two groups)

Fault backup control

Keep back up all the time!

If one of the two indoor units malfunctions and stops its operation, the other starts backup operation so that users' comfort will not be compromised.

Capacity backup control

Maintains users' comfort!

When the control system detects either of its two units operating with overload, the other unit cover the capacity.

Rotational operation control

Energy saving and longer life!

By operating two indoor units alternately, their chronological changes are equalized. (The alternate operation cycle can be specified in a range from 1 to 999 hours in increments of 1 hours.)

Additional functions of External Input / Output

The external input/output of indoor unit by remote controller can set input/output based on user's demand.

External Input

CNT (1-6) CNTA (1-2)	
Input	On/Off Permission/Prohibition Cooling/Heating Emergency Stop
Newly added →	
	Set temp. shift Forced thermo-off IU operation stop Silent mode

External Output

CNT (New)	
2	Output - Operation - Heating - Compressor ON (thermo-ON)
3	Output - Inspection
4	Output - Cooling (defrosting) - Fan operation - Fan operation with Phi or Hi - Fan operation with Me or Lo - Defrosting (oil return in heating operation) - Ventilation - Heater ON
5	Output - Free cooling - IU overload alarm

Silent mode control

The Outdoor unit is controlled prioritising quiet operation. Silent mode control must be set to the F1 or F2 switch. User can start/stop the silent mode control with a single tap of a button.

Indoor unit capacity display

Capacities of Indoor units connected to the RC-EX3A are displayed.

Language Switching

User can select from the following languages and also switch them on the top display.

Error display

If any error occurs with the air conditioner, the "Unit protection stop" is indicated on the message display.

Serviceability & workability (Indoor unit)

Easy and quick installation and maintenance

Builder Maintenance

Quick positioning!

Indoor unit is easily positioned and installed

1 Adjustable easier positioning of unit by new slits FDT	2 New slit in panel allows easier installation on site FDT FDC
<p>New shape of slit is suitable to install the unit with more flexibility, compatible with many kinds of suspending bolt pitch on site.</p> <p>Any rectangular or squared pitch of suspending bolts are available with this slit.</p> 	<p>Flexible positioning is available, which helps adjusting the direction of panel accordingly to lines or pattern on the ceiling.</p>  <p>4 long slits are available.</p>

Quick installation and maintenance

1 Easy access to component part for easy maintenance FDT	2 New shape of path of wiring FDT
<div> <div> 1 The control box and bell mouth can be removed together. </div> <div> 2 Easy access to impeller and fan motor. </div> </div> 	<p>New shape of path gives easy wiring work for installation.</p> 
3 No need to remove screws to open the controller cover FDT	4 More safe installation by stopper of washer FDT FDC
<p>It is possible to loose and slide open the cover without removing the screws.</p> <p>This prevents the cover from falling and causing damage on site.</p> 	<p>When unit is installed with hook between washers, this stopper helps to install the unit safely, without adjusting washer.</p> 

For smooth and easy working

Easy installation and maintenance

<p>1 Easy and flexible hook to remove the filter</p> <p>FDT FDTC</p> <p>Hook of soft material helps to remove the filter without dust spreading.</p>  <p>Press the filter tab to the outside and remove the filter.</p>	<p>2 Securely fix the corner lid by strap</p> <p>FDT</p> <p>The direction of the strap hook part has been changed from longitudinal to lateral. Furthermore, a barb has been added to the hook pin to prevent the strap from coming off.</p>  <p>Before</p> <p>Easy to hook but not easy to loose</p> <p>After</p>									
<p>3 Drain-up-lift increases up to 850 mm</p> <p>FDT FDTC</p> <p>The drain can be lifted up to 850 mm from the ceiling surface.</p> <table border="1"> <thead> <tr> <th></th> <th>Previous</th> <th>New</th> </tr> </thead> <tbody> <tr> <td>FDT</td> <td>700</td> <td>850</td> </tr> <tr> <td>FDTC</td> <td>600</td> <td>850</td> </tr> </tbody> </table>  <p>Up to 850 mm</p> <p>Flexible hose</p>		Previous	New	FDT	700	850	FDTC	600	850	<p>4 New port to check drain water flow</p> <p>FDT</p> <p>A water supply port has been provided in the piping lid for easier testing of the drain water flow. (The port is usually sealed with a rubber cap.)</p> 
	Previous	New								
FDT	700	850								
FDTC	600	850								
<p>5 Re-use of packages during construction work</p> <p>FDT FDTC</p> <p>Package material (carton) helps to protect the unit from unexpected welding spatter or dust on the new unit.</p>  <p>Spatter</p>	<p>6 More flexible outlet for ducting</p> <p>FDT FDTC</p> <p>Both $\Phi 125$ and $\Phi 200$ (oval shaped) are available.</p>  <p>$\Phi 125$</p> <p>$\Phi 200$</p>									

Support tool

TIME SAVING SOFTWARE

BIM (Building Information Modelling)

We can provide high quality Building Information Modelling (BIM) models in three formats:

1. Revit
2. 3D Cad
3. IFC (IFC provides an interoperability solution between different software applications. The format establishes international standards to import and export building objects and their properties)

How and why BIM is used

BIM enables all disciplines of a project (Architects, engineers, quantity surveyors, contractors, clients etc..) to share a common model and data representing the project they are building.

- Better design visualization
- BIM reduces conflicts and changes during construction
- Increases overall accuracy of project documentation
- Improves cost estimating
- Improves energy analysis
- Simplifies reporting and scheduling

<https://mhiae.com/BIM/>

e-seasonal

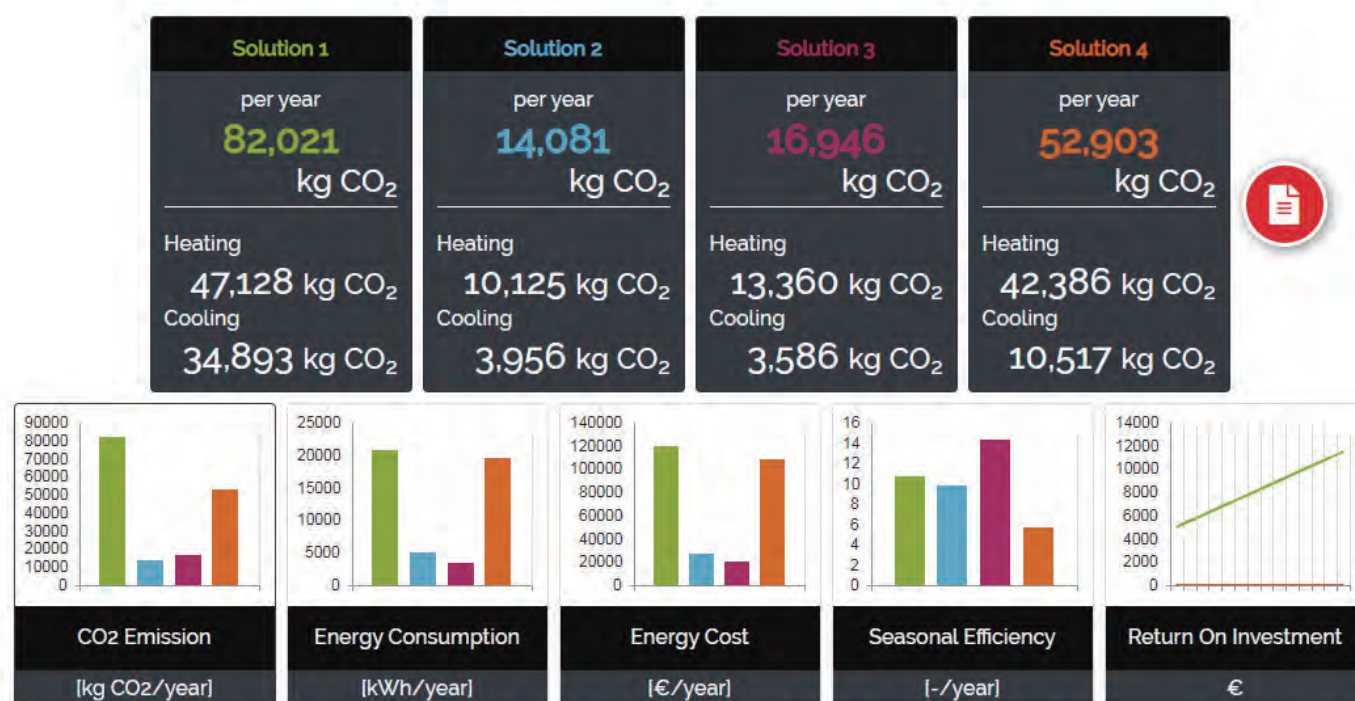

e-seasonal is an application for our Air cooled VRF Outdoor unit selection.

By selecting a combination of systems, location and occupancy profiles you can simulate:

- 1) Annual seasonal efficiency calculation
- 2) Annual energy consumption, cost and CO₂ emission estimation
- 3) Comparison with multiple solutions including conventional heaters

It is possible to download to your PC for an offline version or using a web browser for an online version. e-seasonal provides solution suggestions according to your requested design conditions.

Coming soon

e-solution

Use our e-solution design software tool to find the latest specifications for our KXZ VRF systems. This software helps to simplify the processes to enable engineers to select the most suitable indoor units, outdoor units, pipework, controls & calculate any additional required refrigerants.

If you're an engineer interested in using e-solution, please register and download the e-solution via <https://mhiae.com/e-solution/> and be sure to download the latest updates when available.

Please be aware that this tool was developed to cater for the design of two and three pipe systems, and specifies the appropriate models and sizes. It also generates wiring diagrams and engineering drawing to export to AutoCAD or PDF. This flexibility allows engineers to print selected design information and technical data to present to potential clients. As well as personalising the design information into their own formats and documents for future proposals.

MHI e-service App

MHI e-service application is available & free to download to both IOS and Android devices.

The application covers "Mitsubishi Heavy Industries Thermal Systems, Ltd" Air conditioning systems: Split (RAC & PAC), VRF, Q-ton & AtoW.

This "MHI e-service" Application enables field engineers to make:

- A quick search of the meaning of error codes that may appear when there is a malfunction in a "Mitsubishi Heavy Industries Thermal Systems, Ltd" Air conditioning system, and the probable cause for the malfunction.

- Scan the unit's QR code and search the meaning of error codes depending on the model type

- Additional refrigerant charge calculation for Split (PAC, RAC) & VRF

- Currently available in English & Spanish languages and Italian

To download the App go to:

iPhone:<https://apps.apple.com/gb/app/mhi-e-service/id1208986291>

Android:https://play.google.com/store/apps/details?id=com.mitsubishi.apps.conapp&hl=en_GB

Outdoor unit

High Efficiency & Comfort

Improved Efficiency

The graphs below highlight the improved efficiencies of the KXZ2 standard and Hi-COP models compared to the previous models.

Comparison of EER in cooling mode

Comparison of COP in heating mode

High efficiency and compact design are achieved by applying advanced components
10~60HP

Variable Temperature and Capacity Control

VTCC

- The VTCC is a energy saving function designed by Mitsubishi Heavy Industries Thermal Systems.
- A new feature to all our KXZ ranges which provides up to 34%* energy savings in both cooling and heating mode.
- VTCC is a function specifically designed to maximise energy savings in partial load conditions throughout all seasons.

*34% energy savings are based on comparison with a KXZ standard model with VTCC vs. a KXZ standard model both under partial load condition.

Normal operation (in the cooling mode)

Energy saving operation (in the cooling mode)

VTCC adjusts the target pressure of the refrigerant cycle in the outdoor unit automatically according to the demand of the indoor units in partial load conditions. These smooth adjustments ensure an optimal capacity usage of the indoor units as well as maximised energy savings. Ultimately this also increases comfort for the user. For example, in partial load conditions where you have low cooling and heating requirements, VTCC reduces the compressor frequency and controls the actuators in the outdoor unit. Overall with the VTCC functionality you will always have an additional energy saving of up to 34% (depending on configuration and usage of system) in low cooling and heating load requirements.

Continuous Heating Capacity Control (CHCC)

Our defrosting control achieves more capacity than that of previous model in low ambient temperature condition. Target pressure is controlled automatically before capacity drops, which makes longer period of heating operation and shorter defrosting time.

Multiport compressor that achieves high efficiency

The multiport discharge area in the compressor has optimized pressure control with better balancing. The performance improvement at medium Hz has resulted in higher annual efficiencies.

Concentrated winding motor achieves "High Output" and "Total Efficiency Improvement"

The high performance CPU enables high precision optimization for compressor speed, which leads to concentrated winding motor use. Our product achieves high output and better energy saving effects and in particular improves seasonal efficiency rating.

Energy efficient Heat-exchanger

With piping layout rearranged from header to heat exchanger, refrigerant distribution flow has improved and maximum energy efficiency has been achieved.

Furthermore due to expansion of effective the heat transfer area in heat exchanger, energy efficiency has increased.

Strengthened resistance against frost

Resistance against frost has been strengthened by adopting the energy efficient heat-exchanger.

Vector control

Applied Vector control has a high efficiency and many new advanced features.

- Smooth operation from low speed to high speed
- Smooth Sine Voltage Wave form are attained
- Energy efficiency is further improved in low speed range

DC Fan Motor

Adoption of DC fan motor has enabled to realize an excellent efficiency of approximate 60% higher than previous models.

Oil level control capability

Our proprietary technology adjusts the oil level when combining two or three outdoor units, achieving level operation rate, keeping performance of the units and ensuring long life of the system.

Capacity control

The peak cut function can easily be set on the controller. This function makes the control of the capacity easier and allow a better energy management over the long term. Four steps of capacity control are available with 80%, 60%, 40%, 0% (off). Schedule can be set up to 4 operations/day.

4~6HP (Micro)

Optimum Refrigerant System Control

- Optimum heat exchanger refrigerant distribution
- Advanced refrigerant liquid return protection control system
- High speed system control by new Superlink system

Compact high efficiency Heat Exchanger

- Optimizing relationship of the air flow velocity & fin pattern
- Improvement of air distribution Maximizing efficiency of heat exchanger

Heat Exchanger

Compact Integrated PCB

- Control Box size reduction
- PCB size reduced by 50%
 - Control PCB: Single-sided board → Double-sided board
 - Inverter PCB: Power transistor size reduction
- New Superlink system control
- New Design method applied

8~12HP (Micro)

Design Flexibility

Indoor unit capacity connection

	HP	Capacity connection
Micro KXZ	4~6	150%
	8~12	150%
KXZ Lite	8~10	120%
	10~16	200%
	17~34	160%
Standard KXZ2	36~60	130%

Connectable indoor units

Micro KXZ	HP	4	5	6	8	10	12	KXZ Lite						HP	8	10
	Numbers	8	10*	10*	22	24	24							Numbers	8	8

Standard KXZ2	HP	10	12	14	16	17	18	20	22	24	26	28	30	32	34
	Numbers	37	44	53	60	50	53	59	65	71	78	80	80	80	80

	Numbers	80	80	80	80	80	80	80	80	80	80	80	80	80	

*When connecting 9 units or more, set the total capacity as follows : 5HP : 110% or less, 6HP : 100% or less. In the case of R410A.

Wide Range of Operation

KXZ series permits an extensible system design with a heating range operation down to -20°C and a cooling range operation up to 46°C. Furthermore KXZ Lite extends a cooling range operation up to 50°C.

Control Systems

All series offer wide choice of control system and provide the best solution.

[Control system units with SUPERLINK-II]

Classification	Type	Model	Connectable Indoor units (Maximum)	Electric power calculation
Individual controller	Wired	RC-E5	16	—
		RC-EX3A	16	—
	Wireless	RCN-T-5BW-E2 etc.	16	—
Center Console	Push buttons	SC-SL1N-E	16	—
		SC-SL2NA-E	64	—
	Touch screen	SC-SL4-AE3	128	—
		SC-SL4-BE3	128	●
	BMS interface units	Web gateway & BACnet	256(128x2)	●
		Lonworks	96	—

Long Pipe Length 10~60HP

The maximum height difference between indoor units has been increased to a maximum of 30m, and the maximum height difference between the outdoor unit and indoor unit has been expanded to 90m. For with few limitations, contributes to system design flexibility.

*1 The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m. (MAX85m)

*2 It is necessary to change the setting corresponding to each height difference in installation. The range of use is also different.

Easy Transportation & Installation

Due to realization of significant reduction in size and footprint which is one of the smallest in the industry, transportation in an elevator made for six persons (Width:1400mm, Depth:850, Open area:800mm) is possible, eliminating cost of a crane and reducing labor.

KXZ is portable and the uniform reduced footprint allows neat, continuous installation.

Blue Fin

Due to application of blue coated fins on the heat exchanger of the new outdoor unit, corrosion resistance has been improved compared to previous models.

Priority operation mode rule

User can select the following priority operation mode. (for whole system)

1. First unit's operation mode (by default setting)
2. Last unit's operation mode
3. Majority operation mode (see below)
4. Master operation mode (see below)

<Majority operation mode>

The system is operated according to the mode selected by the majority of units in operation (whichever greater capacity between the sums of cooling mode and heating mode). The operation mode in minority is set to fan mode automatically.

<Master operation mode>

The system is operated according to master operation mode. When master operation mode is set at cooling mode, units selected as heating mode is set to fan mode automatically.

Fixed Cooling mode/fixed heating mode (summer/winter switch)

It is possible to fix the operational mode of the system (either cooling or heating) using a switch (SW3-7) on the outdoor unit PC board - this enables the building user to decide the operation of the system (e.g. cooling only in summer/heating only in winter), to avoid unnecessary energy wastage. It is also possible to wire the control switch to a remote location (inside the building) to a control room, or even linked to an ambient thermostat.

Serviceability

Easy Service

Quick and easy access to service parts by separation of compartments.

Check Operation (10~60HP)

Closing of Service valve, crossing connection of refrigerant piping and electrical wiring, proper operation of EEV (Electrical Expansion Valve) can be checked automatically in cooling operation. This check operation can be done at 0~43°C outdoor temperature and 10~32°C indoor temperature by use of outdoor unit dip switch. The check should be done in one refrigerant system. It takes 15~30 minutes and avoids frequent failure by preventing careless mistakes during installation.

Monitoring Function

All series include features to assist with servicing and troubleshooting.
Various data can be monitored through 3-digit or 6-digit display on the outdoor unit PCB.

Detailed fault diagnosis and operation history memory via 7-segment display.

4~6HP
8.10HP(KXZ Lite)

8~60HP

To your PC monitoring and service tasks made simple with our service software ("Mente PC").

Automatically produced test-run report

[illegible]

Operation data storage during servicing

Operation data storage when a fault occurs

SL Checker II

Remote Control can be operated function from setting Superlink checker.

3 Layer Construction

Thanks to control box structure with 3 layer/2 layer construction using hinge connection, service and maintenance has been made much easier for inverter components.

KXZ (3 layer)

KXZ Lite (2 layer)

Back-up Operation

In the event that one unit has a failure, the system will keep operating with the other units.

For the event that one compressor has a failure, the unit will keep operating with the other second compressor.

This operation is an emergency measure for a limited time and a necessary repair should be done as soon as possible.

Micro KXZ Heat pump systems

4 ~ 6HP (12.1kW~15.5kW)

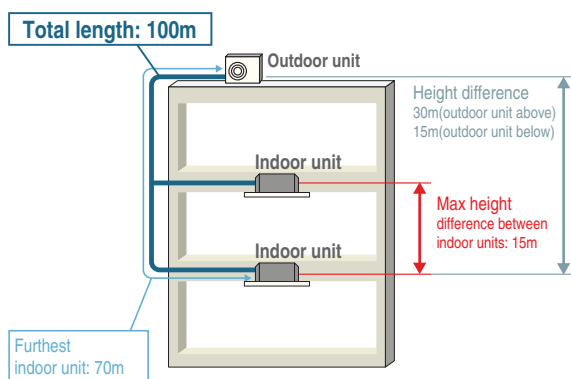

Model No.	Nominal Cooling Capacity
FDC121KXZEN1-W	12.1kW (220V)
FDC140KXZEN1-W	14.0kW (220V)
FDC155KXZEN1-W	15.5kW (220V)
FDC121KXZES1-W	12.1kW (380V)
FDC140KXZES1-W	14.0kW (380V)
FDC155KXZES1-W	15.5kW (380V)

NEW

Blue Fin

- Low Global Warming Potential (GWP) and High energy efficiency by new refrigerant R32.
- Connect up to 10 indoor units/up to 150% capacity.
- High efficiency with EER up to 4.08.
- These units employ DC inverter compressors ONLY.
- Industry leading total piping length up to 100m and a maximum pipe run of 70m.

* The total length of ø9.52mm(3/8") liquid piping must be 50m or less

FDC280KXZME1	28.0kW
FDC335KXZME1A	33.5kW

- Connect up to 24 indoor units/up to 150% capacity.
- High efficiency with EER up to 4.00.
- These units employ DC inverter compressors ONLY.
- Industry leading total piping length up to 510m and a maximum pipe run of 160m.

* The difference between the longest and the shortest indoor unit piping from the first branch must be within 40m.

Range of operation

1. The data are measured under the following conditions(ISO-T1, H1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.
 2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.
 3. 'tonne(s) of CO₂ equivalent' means a quantity of greenhouse gases- expressed as the product of the weight of the greenhouse gases in metric tonnes and of their global warming potential.
 4. [] : Pipe sizes applicable to European installations are shown in parentheses.

Notes:

- (1) It must not be surrounded by walls on the four sides.
(2) The unit must be fixed with anchor bolts. An anchor bolt must not protrude more than 15mm.
(3) Where the unit is subject to strong winds, the blower outlet should face perpendicularly to the dominant wind direction.
(4) Leave a 1m or more space above the unit.
(5) A wall in front of the blower outlet must not exceed the units height.
(6) The model name label is attached on the lower right corner of the front.
(7) Connect the Service valve with local pipe by using the pipe of the attachment.(Gas side only)
(8) Mark ※ shows the connecting position of the local pipe.(Gas side only)

KXZ Lite Heat pump systems

8, 10HP (22.4kW, 28.0kW)

Model No.	Nominal Cooling Capacity
FDC224KXZPE1	22.4kW
FDC280KXZPE1	28.0kW

- Connect up to 8 indoor units/up to 120% capacity.
- High efficiency with EER up to 4.00.
- These units employ DC inverter multiport compressors with concentrated winding motor.
- KXZ Lite extends a cooling range operation up to 50°C.
- External static pressure is available up to 35 Pa.
- Tropical usage mode.

3. 'tonne(s) of CO₂ equivalent' means a quantity of greenhouse gases- expressed as the product of the weight of the greenhouse gases in metric tonnes and of their global warming potential.

Serviceability

Improved freedom of piping layout

Hole size became 120% bigger.

A transparent rain cover

Attached as a standard for easy maintenance.

Wire insertion holes for fall prevention

Four handles

Located at the same level for easy transport and transfer.

Fixing screws to service panel

Decreased number of screws from 5 to 2, installation & service speed is improved.

Refrigerant piping

Please refer to page 39.

KXZ2 Heat recovery systems

- for simultaneous heating and cooling

The heat recovery systems operate with 3 inter-connecting pipes, commonly referred to as a '3-pipe system'.

The systems provide both heating and cooling operations simultaneously to individual indoor units according to room conditions or user requirements.

The systems incorporate highly sophisticated controls transferring heat load energy from the entire building to provide an efficient, comfortable heating and cooling environment.

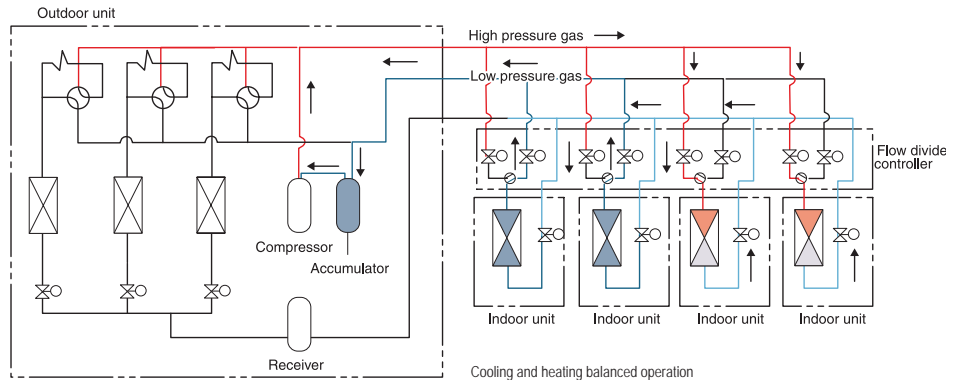

The range starts from a cooling capacity of 8 HP (22.4 kW) and expands up to 24 HP (67.0kW) using a single outdoor unit. Outdoor units can also be used as a modular system (twin or triple) providing up to 60 HP (168.0 kW) of cooling capacity.

Heat recovery systems

The system interconnecting pipework has a unique arrangement, with two of the interconnecting pipes routed through a PFD Distribution Controller, and the third pipe connected directly to each indoor unit from the main pipe run. This reduces installation time, and the number of brazed connections on site. The PFD Distribution Controllers are available for single connection, or as a combined PFD 4-way connection, with each connected unit having independent cooling or heating operation.

During defrosting or during automatic protection of a compressor, which is activated every several hours in heating operation, heating operation temporarily stops and restarts after some period. The series has the same automatic protection of compressor in cooling operation also. During this protection period air flow only comes on and cooling operation restarts after some period.

These models are not suitable for year round cooling applications -such as server rooms- especially in areas where the outdoor air temperature goes below 5°C.

Heat recovery features

High efficiency in simultaneous **cooling** and **heating** mode

Highly efficient operation mode is automatically determined inside the refrigerant system during simultaneous cooling and heating operation. Heat recovery efficiency is maximized by this control and Max COP 9.0 (*) is achieved during operation with simultaneous cooling and heating.

* Conditions for simultaneous cooling and heating (Our estimation in 8HP operation and the following conditions: Temperature outside the room DB16°C/WB12°C, temperature in the cooled room DB27°C/19°C, and temperature in the heated room DB20°C/WB14.5°C)

Energy efficiency in heat recovery mode

High Efficiency

The graphs below highlight the improved efficiencies of the KXZR and Hi-COP models compared to the previous models.

Comparison of EER in cooling mode

Comparison of COP in heating mode

Continuous Heating Capacity Control (CHCC) -

Our CHCC defrosting control achieves more capacity than that of previous model in low ambient temperature condition.

Target pressure is controlled automatically before capacity drops, which makes longer period of heating operation and shorter defrosting time.

(*1) Patent is now under being applied. (*2) This control will be activated in specific condition. Please refer to the technical manual in detail.

Improved cooling capacity in low ambient temperature

Small split heat exchanger and pressure control make it possible for the outdoor unit to work in cooling operation even at low ambient temperature condition, which achieves more capacity in such low ambient condition as -5°C, compared to previous model.

In previous model, when high demand for heating and low cooling demand are required at the same time in low ambient temperature condition, pressure control is adjusted to keep more heating capacity than the cooling capacity.

Adopted heat exchanger and pressure control in KXZR series, has improved its capacity for both heating and cooling capacity at the same time. (*)

(*) Refrigerant system will prioritize required heating mode more than low cooling demand, in case most of the indoor units are operated in heating mode.

Blown air temperature in the cooled room

Improvement of the PFD controller noise level

Sound insulation box design specification, reducing the level of noises from the PFD controller generated due to the flow of refrigerant or other causes.

Sound insulation design

Indoor unit capacity connection

HP	KXZR	HP	KXZRX
8~16	200%	16	200%
17~34	160%	18~34	160%
36~60	130%	36	130%

Connectable indoor units

Up to 80 indoor units can be connected to the largest capacity outdoor unit, with a range of 15 types of exposed or concealed indoor unit, in several capacities, a choice of 82 indoor units is available.

- In case that capacity connection is more than 130%, additional charge of refrigerant is required on site.
- In case of 8-34HP of the systems, if one or more indoor units of FDK, FDFL, FDFU and/or FDFW series are connected to the system, the total connecting capacity of indoor units should not exceed 130%.

Wide Range of Operation

KXZR series permits an extensible system design with a heating range operation under a low temperature condition down to -20°C and a cooling range operation up to 46°C

PFD refrigerant flow branch control

Branch control

PFD1124-E	less than 11.2kW
PFD1804-E	less than 18.0kW
PFD2804-E	28.0kW or less
PFD1124X4-E	less than 37.1kW(less than 11.2kWx4 branches)

Total downstream indoor unit capacity

less than 11.2kW
less than 18.0kW
28.0kW or less
less than 37.1kW(less than 11.2kWx4 branches)

Relay kit
(Relay kit comes attached to the branch control)

4-Way PFD box

Design flexibility

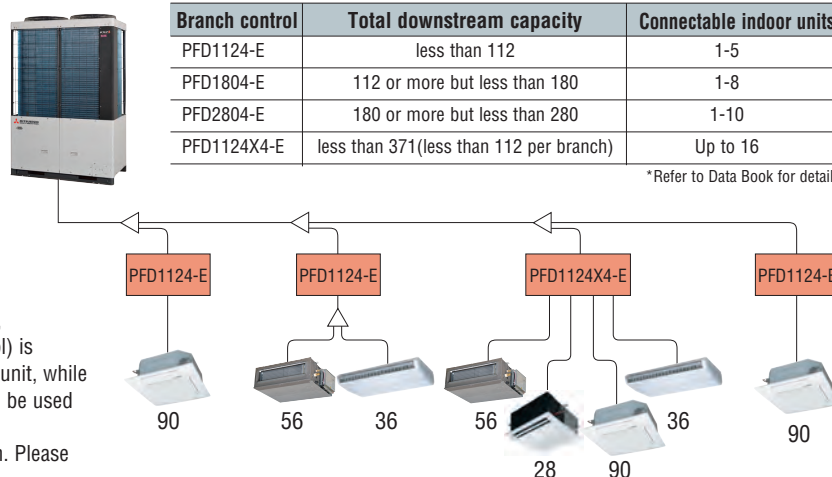

A total of 37.1 kW group of indoor units can be connected to a PFD box single branch. All connected units will operate in the same mode only (cooling or heating).

The recent 4-way PFD control PFD1124X4-E can connect to up to four indoor units with individual control – allowing for simultaneous cooling or heating.

- The remote control setting (as individual indoor unit on-off, temperature setting other than cooling/heating mode control) is possible with one remote control connected to each indoor unit, while at the same time, Center Control (SC-SL1N/2NA/4-AE2) can be used together with the individual remote control.
 - It is necessary to set the central control to use this function. Please refer to the Installation Manual for details.
 - In case of mode changeover from cooling to heating and from heating to cooling, by the use of only the indoor units and PFD box combination, the mode changeover noise is reduced. All this made possible without turning off the compressor and at the same time without the reduction of capacity.
- The risk of refrigerant leakage is reduced by changing piping connection at the PFD box to brazing method.
- The use of optional PFD box extension cable that has a connector at ends, makes it possible to further separate the indoor unit and PFD box. This will enable the PFD box to be located away from the indoor unit and help reduce the influence of sound caused by PFD box and refrigerant flow.

Branch control	Total downstream capacity	Connectable indoor units
PFD1124-E	less than 112	1-5
PFD1804-E	112 or more but less than 180	1-8
PFD2804-E	180 or more but less than 280	1-10
PFD1124X4-E	less than 371(less than 112 per branch)	Up to 16

*Refer to Data Book for details

Easy installation

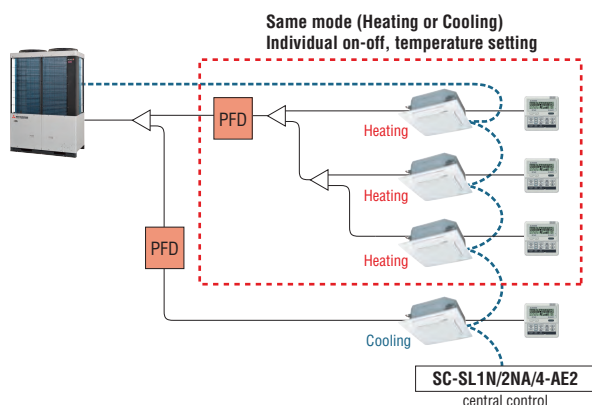

PFD control box design allows to directly connect the liquid pipe from indoor unit to outdoor unit by bypassing the PFD box. As a result, the piping connections per indoor unit are reduced by a third, thus reducing installation time and cost.

extension cable 15m

PFD4-15WR-E (option)

The PFD is connected to the indoor unit by 3 core signal wire via a relay kit (supplied) to be located within 2m of each other. The indoor unit however can be up to 40m away. Power to the PFD can be connected from the indoor unit or other supply.

All measurements in mm.

Earth

Connection wiring (length 2000)

With a connector

Indoor refrigerant piping connection port (gas) #15.88 Brazing

When connecting #9.52mm use the irregular joint A which is provided.

When connecting #12.7mm use the irregular joint B which is provided.

Features

1. High efficiency (EER/COP)

- Energy saving → Reduction of operation cost

2. Compact design

- Easy transportation and installation
- Carriable by elevator

3. BMS (Building Management System)

- Can use the same BMS as air cooled KX
- Available to large-scale and fine control

4. Serviceability & Maintenance

- Service and maintenance of main parts can be done from the front side only
- Useful service tools (Mente-PC, SL-Checker etc.)

Applicable to

1. High-rise Building

- 50m <FDC> , -100m <FDCH>
- 100m or higher in height <FDCW>

2. Glass-exterior facade Building

- Possible to hide KXZW units and to keep fine sight

Refrigerant piping

Installation of Interconnecting Pipework

KXZ equipment is manufactured to meet the highest standards of quality and reliability. It is imperative that the method of installation and the materials used are also to the high standards, to ensure trouble free operation and long term reliability.

The interconnecting pipework must be installed by a competent and trained engineer. Refrigeration quality copper tube must be used, soft copper coils or half-hard straight lengths. The refrigeration quality tube must be soft drawn seamless high grade copper pipe. The copper tube must be selected taking into account the higher operating pressures of R32 · R410A refrigerant, and that high pressures will occur throughout the system because of the reverse cycle operation. All pipework material used should comply with EN12735 European standard.

The supplied branch pipe kits, must be used to make connections to indoor units, and the supplied manifold kits must be used to make connections between outdoor units (where applicable); it is not permitted to use standard fittings such as elbows, tees etc. The branch pipes shall be installed in accordance with the manufacturer's instructions, allowing unrestricted flow of refrigerant, and in accordance with European standard EN378.

All brazed joints shall be made with dry nitrogen purge to ensure the prevention of oxidation of the internal surface of the copper pipes.

The ingress of moisture, dirt and any other contaminants to the interior of the copper pipes, and air conditioning units, must be prevented during the installation procedure.

After the installation of pipework, prior to the connection of the outdoor units, and sealing of insulation joints, the pipework must be pressure tested for leakage, using dry nitrogen.

Additional Refrigerant

Only R32 · R410A refrigerant shall be used, it must be charged by weight only, using electronic scales. The amount of additional refrigerant must be accurately calculated from the manufacturer's data, based on the length and diameter of each section of the liquid refrigerant pipework of the system.

The products contains fluorinated greenhouse gases covered by Kyoto protocol.

Standard (Outdoor unit side branching pipe – Indoor unit side first branching pipe)

If the longest distance (measured between the outdoor unit and the farthest indoor unit) is 90m or longer (actual length), please change the main pipe size according to the table below.

Outdoor unit	Main pipe size (normal)		Pipe size for an actual length of 90m or longer		mm	inch					
	Gas pipe	Liquid pipe	Gas pipe	Liquid pipe							
280	ø22.22 × t 1.0	ø9.52 × t 0.8	ø25.4 (ø22.22) × t 1.0	ø12.7 × t 0.8	ø9.52	3/8"					
335	ø25.4 (ø22.22) × t 1.0	ø12.7 × t 0.8			ø28.58 × t 1.0	ø12.7	1/2"				
400	ø25.4 (ø28.58) × t 1.0				ø31.8 × t 1.1 (ø28.58 × t 1.0)	ø15.88 × t 1.0	ø15.88	5/8"			
450	ø28.58 × t 1.0						ø15.88 × t 1.0	ø19.05 × t 1.0	ø19.05	3/4"

Electrical wiring – power supply

KXZ has greatly simplified wiring requirements utilising a ‘polarity-free’ two wire control loop connecting the indoor units.

Power wiring

Cables can be laid through the front, right, left or bottom of the outdoor unit casing.
Separate power supplies should be used for the outdoor unit (3Phase) and the indoor units (1Phase).
Only control wiring is connected from outdoor to indoor unit.

CAUTION

If the earth leakage breaker is exclusively for ground fault protection, then you will need to install a circuit breaker for wiring work.

Electrical wiring – control wiring

1. The control wiring is 5 Volt DC, non-polarised, two wire connection notated as 'A1' and 'B1'. This 'AB' wiring connects outdoor unit to indoor unit and indoor unit to indoor unit.

2. This wiring must be a 2-core shielded cable size 0.75mm² or 1.25mm².

	0.75mm ²	1.25mm ²
~1000m	YES	YES
1000~1500m	YES	NO

3. We recommend both ends of the shield of the cable are connected to ground (earth) at all the indoor units and outdoor units.

4. When multiple outdoor units are used,

- Connect the signal cable between indoor and outdoor units and the signal cable between outdoor units belonging to the same refrigerant line to A1 and B1.
- Connect the signal line between outdoor units on different refrigerant lines to A2 and B2.

5. For current specification of 2-core (AB) wiring, please consult your dealer.

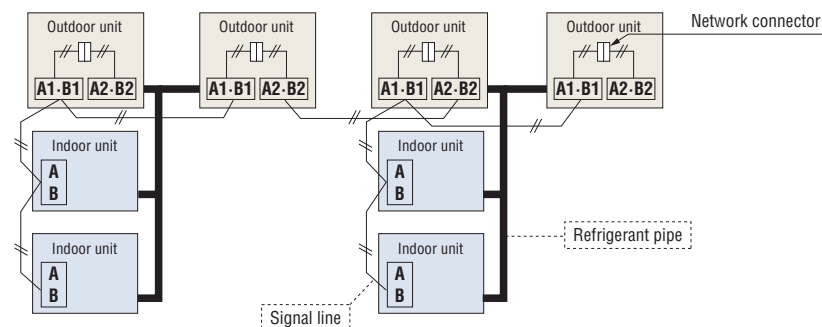

(1) When one outdoor unit is used

Indoor and outdoor signal lines do not have a polarity. Any of the connections in the following illustration can be made.

(2) When plural outdoor units are used

The maximum number of indoor units that can be connected in a system is 128 and it is possible to configure outdoor units and/or indoor units as an outdoor or indoor unit group connected with each other with two wires.

(3) The signal lines can also be connected using the method shown below.

Important

Loop wiring prohibited

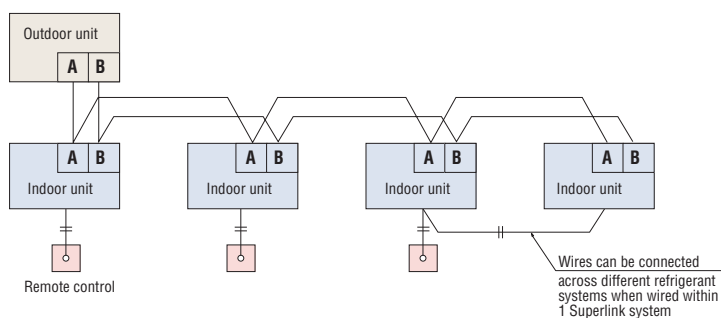

The signal lines cannot form a loop, so the wirings shown as - - - - - in the diagram are prohibited.

Remote control wiring specifications

For interconnecting wiring between the remote control and indoor units (XY wiring) use 2-core cable size 0.3mm². The maximum length of 2-core cable is 600 metres. Where the 2-core wiring exceeds 100m, use the wire size detailed on the table below.

Length (m)	Wire size
100 to 200	0.5mm ² x 2 core
To 300	0.75mm ² x 2 core
To 400	1.25mm ² x 2 core
To 600	2.0mm ² x 2 core

Indoor units

Benefits Summary

When using RC-EX3A (Remote control), functions with symbol  are available.
However, for RC-E5 (Remote control), functions with  are not available.

Energy Saving	Inverter technology	Inverter control technology delivers high efficiency and a smooth operation from high speed to low speed. A smooth sine voltage wave is attained.
	Energy-saving★	Since the capacity is controlled automatically based on the outdoor temperature, energy can be saved without losing comfort.
	Motion sensor★	This sensor detects human activity and shifts the temperature setting according to the amount of activity in the room.
	Home leave operation★	This function ensures that when the room is unoccupied for long periods of time, the unit will maintain a moderate indoor temperature, avoiding extremely hot or cool temperatures.
	Set temperature auto return★	This function allows the user to program a preferred set temperature that the unit will return to each time it is operated.
Comfort	Automatic operation	This function automatically selects the required heating or cooling function based on the current room conditions.
	Silent operation	This function allows the user to program periods where the unit will operate with reduced noise levels, perfect for night time and an uninterrupted sleep.
	Hi power operation★	Use the high power function to quickly reach your optimum temperature level when you first turn on the unit. This function will operate for a maximum of 15 minutes before returning to normal operation.
Air flow	Flap control system	This function allows the user to set the upper and lower limit positions of the flap at each air outlet individually, providing you with complete control over interior air flow.
	Vertical auto swing	The vertical louvers on your unit will move up and down continuously during operation. This function allows you to set the up/down swing position of the louver to the preferred operation angle.
	Draft prevention setting★	Draft Prevention setting provides a comfortable air flow without any draft feeling. Whether cooling or heating a room, the remote control can be used to instantly suppress any warm or cool drafts. This accurately assists how air flow is directed out of the indoor unit.
	Automatic fan speed	The unit's on-board microcomputer continuously monitors the room's air temperature and adjusts the air flow automatically.
Timer	Sleep timer	This function allows the user to set a pre-determined amount of time between 30 and 240 minutes that your unit will operate for before switching off.
	Peak-cut timer★	This function lets the user to preset the capacity limit during certain periods of the day, minimising energy consumption during peak billing times, thus reducing operation costs.
	Weekly timer	Set the unit to turn on and off automatically on a weekly basis to suit your usual room usage on each day.
Convenient	Function Switch★	From the eight available functions on the unit, this function allows the user to set two functions to operate automatically.
	Favourite setting★	Operation mode, set temperature, fan speed and air flow direction automatically adjust to the programmed favourite setting.
	Static pressure adjustment	This is operable when connecting duct type indoor units equipped with the external static pressure adjustment function. It will adjust the airflow accordingly based on the connected duct static pressure.
	Select the language★	Set the language to be displayed on the remote control.
	Air filter	The air filter in the unit traps and removes airborne dust particles and other allergens to provide you clean air.
	Filter sign	This warning alerts when the filter needs to be cleaned.
	Outside air intake	This function provides clean fresh air into the room through the external air intake, avoiding the constant recycling of internal air.
Others	Self diagnostics	The internal microcomputer automatically runs a diagnostic of the system in the event of a malfunction. This enables authorised dealers to isolate and repair any issues.
	Built in drain pump	The built-in drain pump, allows greater flexibility with installation, offering a great solution for applications with limited space.
	Improved serviceability	The fan unit (comprised of impeller and motor) is easily accessible from either the side or bottom of the unit and can be slid out for easy maintenance.

*R32 indoor unit are not compatible with R410A outdoor unit and vice versa.

Draft Prevention Panel (Option)

(Option)

This prevents cold/hot draft being blown directly on the user. It is possible to set Draft Prevention Panel for each air outlet.

Advanced airflow control technology cultivated through aircraft development.

User can position panels by using the remote controller (RC-EX3A, Wireless kit) only when Draft Prevention Panel is available.

Draft Prevention Panel working

Draft Prevention Panel placed at off position

Motion Sensor

(Option)

Motion sensor is equipped in the corner of the panel and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-T-5BW-E(White)
LB-T-5BB-E(Black)

Improve the aerodynamic performance of the unit

New designed component has better aerodynamic performance and achieve lower noise.

New design turbo fan

Fan guard (standard equipment)

Panel select pattern

(Option)

8 patterns of panel are available.

Installation position of Wireless kit and Motion sensor kit

*Wireless receiver and Motion sensor can be installed to the position as shown

- ① Standard Panel only
- ①+③ Standard Panel with corner panel with motion sensor
- ①+④ Standard Panel with corner panel with wireless receiver
- ①+⑤ Standard Panel with corner panel with motion sensor & corner panel with wireless receiver
- ② Draft Prevention Panel only
- ②+③ Draft Prevention Panel with corner panel with motion sensor
- ②+④ Draft Prevention Panel with corner panel with wireless receiver
- ②+⑤ Draft Prevention Panel with corner panel with motion sensor & corner panel with wireless receiver

Individual flap control system

According to room conditions, four directions of air flow can be controlled individually by utilizing the flap control system. Individual flap control is available even after installation.

Flap can swing within an upper and lower flap range position that can be selected with a wired remote control.

*The wireless remote control is not applicable to the Individual flap control system.

850mm Drain Pump

Drain can be discharged upwards up to 850mm from the ceiling surface, allowing a piping layout with a high degree of freedom. Thanks to the 185mm flexible hose, equipment supports easy workability.

Suitable for High ceilings

The Powerful blowout carries comfortable air flow to the floor even in high ceiling applications. It is ideal for high ceiling offices, stores, etc., with a wide, uniform air flow throughout the room.

Easy check of drain pan

Easy inspection of the condition of the drain pan is possible by removing only the corner lid.

Remove corner lid.

Remove drain cap cover and check the condition. It is necessary to clean-up, firstly remove the rubber stopper to drain water out and secondly remove the drain cap.

Clean up the area around the drain pump port.

European design & Flat panel

Unique Grille Design

A grille designed with a unique structure and a clean white panel that blends with the room.

Honeycomb type

Grid type

Integrated ceiling system design 600x600

Easy installation - with a weight of only 14kg, a thin panel, and a main body size of only 248mm.

Taking OA (Outside Air) into inside

Fresh air can be taken in without optional parts. When the fresh air is insufficient, optional parts can be used.

**OA Spacer TC-OAS-E2(option)
Joint Duct TC-OAD-E(option)**

Draft Prevention Panel

(Option)

This prevents cold/hot draft being blown directly on the user. It is possible to set Draft Prevention Panel for each air outlet.

User can position panels by using the remote controller (RC-EX3A, **Wireless kit**) only when Draft Prevention Panel is available.

Motion Sensor

(Option)

Motion sensor is equipped in the corner of the panel and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-TC-5W-E

Panel select pattern

(Option)

8 patterns of panel are available.

- ① Standard Panel only
- ①+③ Standard Panel with corner panel with motion sensor
- ①+④ Standard Panel with corner panel with wireless receiver
- ①+⑤ Standard Panel with corner panel with motion sensor & corner panel with wireless receiver
- ② Draft Prevention Panel only

- ②+⑤ Draft Prevention Panel with corner panel with motion sensor & corner panel with wireless receiver

Individual flap control system

According to room temperature conditions, four directions of air flow can be controlled individually by following Flap control system. Individual flap control is available even after installation.

The flap can swing within the range of upper and lower flap position selected with wired remote control.

※The wireless remote control is not applicable to the Individual flap control system.

850mm Drain Pump

Drain can be discharged upward by 850 mm from the ceiling surface close to the indoor unit. It allows a piping layout with a high degree of freedom depending on the installation location.

Suitable for High ceilings

The Powerful blowout carries comfortable air flow to the floor even in high ceiling applications. It is ideal for high ceiling offices, stores, etc., with a wide, uniform air flow throughout the room.

Individual flap control system

We've optimised our outlet design with advanced technology to allow you to control up to four directions of air flow. Allowing you to control air direction via the flap systems and room temperature.

The flap can swing within the range of upper and lower flap position selected with wired control.

*The wireless remote control is not applicable with the individual flap control system.

Installation workability

Drainage spout

Drainage flow test can be done easily by use of this drainage spout.

Transparent access hole to drain pan

Condition of the bottom of a drain pan can be checked through this transparent access hole without removing drain pan.

Motion Sensor

(Option)

Motion sensor is equipped in the corner of the panel and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-TW-6W

750mm Drain Pump

The drain discharge system allows for a piping layout with a high degree of freedom (dependent on installation location). Discharge from above 750mm from a ceiling surface to the indoor unit.

Refrigerant piping size													

1. The data are based on the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.
2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.

Dimensions

All measurements in mm.

Direct blow panel (TQ-PSA-15W-E)

Direct blow panel (TQ-PSB-15W-E)

Symbol	Model	Content
	FDT022KXEGF, 2B0XEGF	FDT036KXEGF
A	Gas piping	φ9.52 (3/8") (Flare)
B	Liquid piping	φ6.35 (1/4") (Flare)
C	Drain piping	VP 25 (O.D.32)
D	Hole for wiring	φ30
E	Suspension bolts	M10
F1,2	Outside air opening for ducting	(Knock out)

Duct panel (QR-PNA-14W-ER)

Duct panel (QR-PNB-14W-ER)

Notes

- (1) The model name label is attached on the fan case inside the air return grille.
- (2) This unit is designed for 2X2 grid ceiling.

* In case of Direct blow panel

Make a space of 3000 or more between the units when installing more than one.

Remote control (option)

Wired

RC-EX3A RC-E5 RCH-E3

Wireless

RCN-KIT4-E2

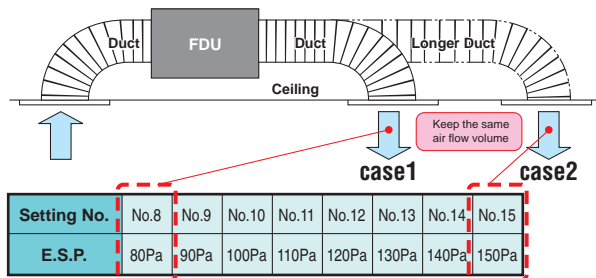

*R32 indoor unit are not compatible with R410A outdoor unit and vice versa.

External Static Pressure(E.S.P) control

Manually set the E.S.P on the wired controller, and the indoor unit will control the fan speed to keep rated air flow volume at each fan speed setting. You can set a required E.S.P by your wired remote controller – calculated with the set air flow rate and the pressure loss of the duct.

E.S.P. button RC-E5
External Static Pressure (E.S.P.) can be set by E.S.P. button.

*Range of 80~150 Pa is set at ex-factory default.
Range of 10~200 Pa is available by setting SW8-4 switch on at site.

Motion Sensor

(Option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-KIT2

Thin design

The height of all FDU models only 280mm

Reduction of sound pressure level

Transparent inspection window

Dirt condition of the bottom of the drain pan can be checked through this transparent inspection window without removing drain pan. (Please refer to P82)

Improvement of the serviceability

Fan unit (impeller and motor) can be pulled out from the right side of the unit. Maintenance can be carried out from the right side or the bottom side of the unit.

Round duct adapter

In case of requirements of round duct adapter, please refer to P95.

UM-FL2EF : for 71, 90
UM-FL3EF : for 112, 140, 160

*Filter pressure loss:5pa

Remote control (option)

Wired

Wireless

*R32 indoor unit are not compatible with R410A outdoor unit and vice versa.

Automatic external static pressure (E.S.P.) control

Using the automatic control, DC motor, the most optimum air flow volume is achieved. The indoor unit will recognise external static pressure automatically and keep rated air flow volume.

External static pressure (E.S.P.) can be set by E.S.P. button.

Thin design

The height of all FDUM models only 280mm

Transparent inspection window

Dirt condition of the bottom of the drain pan can be checked through this transparent inspection window without removing drain pan. (Please refer to P82)

Motion Sensor

(Option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

Improvement of the serviceability

Fan unit (impeller and motor) can be pulled out from the right side or the bottom side of the unit. Maintenance can be carried out from the right side or the bottom side of the unit.

Installation data Refrigerant piping size		mm(in)	Liquid line:ø9.52(3/8") Gas line:ø15.88(5/8")				

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.
2. Sound pressure level indicates the value in an anechoic chamber. During operation these values are somewhat higher due to ambient conditions.

1. The data are measured under the following conditions(ISO-T1). Cooling: Indoor temp. of 27°CDB, 19°CWB, and outdoor temp. of 35°CDB. Heating: Indoor temp. of 20°CDB, and outdoor temp. of 7°CDB, 6°CWB.

2. The data of nominal cooling and heating capacity and sound pressure level are measured with 10Pa of external static pressure.

3. The sound level indicates the value of rear-intake type with duct in anechoic chamber. During operation these values are somewhat higher due to ambient conditions.

4. Sound Pressure Level shows the value when the supply duct of 2m and the return duct of 1m (except the Bottom air return) are connected to the unit.

Sound pressure level ^{*1} : Mike position is 1.5m below the unit, ^{*2} : Mike position is 1m in front and 1m below of the air supply duct.

Compact and thin size, light weight

Our leading high technology has created the best solution for air conditioning in hotels. The compact and thin sized units don't compromise on high energy efficiency all while weighing in at only 20kg.

The lowest sound level in the industry can ensure comfortable stay and rest in hotels.

Motion Sensor

NEW

(Option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

LB-KIT2

Installation Flexibility

Control box and drain piping can be installed on both side of the unit and air intake to the unit is available from bottom or back side. Our highest technology can satisfy diverse installation requirements.

Wired remote control

RCH-E3
(option)

Simple remote control

Designed specially for hotel rooms, control buttons are limited only to the minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

Elegant Timeless Design

The FDK series air conditioners are innovatively designed with rounded contours that beautifully fit into any of Europe's diverse interior settings. Created by an Italian industrial design studio based in Milan, Tensa srl, the design meets a broad range of requirements. (FDK15-56)

Flap control system

Selection of flap position is possible. A flap can be set at different angles.

*The wireless remote control is not applicable to the flap control system.

Lateral Swing ► flap swings from right to left automatically

Up/Down Flap swing + Lateral swing

Jet Technology

FDK models adopt the air flow design that's proven to minimise resistance in a CFD analysis to achieve uniform air conditioning to the furthest corners of the room.

Fast ← → Slow
Colours in the figure show the air speed.

Motion Sensor

(Option)

Motion sensor is equipped in the ceiling plane or wall plane and detects the presence/absence and activity of humans in a room to improve the comfort and energy saving performance of the unit.

Reduction of sound pressure level (Lo mode)

We achieved the industry's lowest sound pressure levels by decreasing air flow volume, decreasing pressure loss with employment of one fan motor and optimising casing and distributor shape.
(comparison of previous model)

Motion Sensor

(Option)

Reduce your environmental impact with our optional motion sensor feature.

By detecting presence or absence of human activity in a room, the motion sensor improves room comfort and unit energy saving performance.

Sophisticated Design

With an elegant semi flat front panel in stylish white, the new series fit in various kinds of rooms and create relaxing atmosphere. Choice of wall hanging, floor standing or behind gallery installation is available.

Flap control system

Selection of flap position is possible. A flap can be set at different angles.

* The wireless remote control is not applicable to the flap control system.

Quiet Operation

Thanks to the optimum balance of air outlet direction and sufficient air flow volume, the sound level has been minimized. The level of FDFW28KXE6F in the cooling Lo mode is only 30dB(A).

Convenient to use operation

Simultaneous lower and upper air outlets or upper outlet can be selected by air flow direction button. Further control can be arranged by a remote control.

(In case of use of wireless remote control)

Create a fresher environment with the Outdoor Air Processing feature

Connect your KXZ system to an Outdoor Air Processing unit with one streamlined system. This advanced technology allows you to enjoy a fresh and comfortable air supply.

Motion Sensor

(Option)

Built into the ceiling or wall plane, our motion sensor smart technology improves energy saving performance and overall room comfort.

LB-KIT2

Compact design

Compact design at just 280(650, 1100), 379(1800, 2400)mm in height, high static pressure of 200Pa and the industry's lowest noise level can meet various kind of installation locations for offices, refresh rooms, restrooms and kitchens of restaurants etc.

- (1) This unit is the specific unit for processing the outdoor air temperature closer to the room temperature. For conditioning the room temperature a dedicated air conditioner is required additionally.
- (2) This unit monitors the outdoor air temperature and controls the thermostat's ON/OFF at the setting temperature by the remote controller, which indicates the outdoor air temperature for controlling the thermostat's ON/OFF. When the thermostat is turned OFF, the operation is changed to the fan mode so that unprocessed outdoor air will be blown into the room directly. Therefore place the air outlet port or orient the air outlet direction not to blow air directly to persons in the room, especially in small room such as a restroom and/or sanitary hot water supplying room.
- (3) It is strictly prohibited to monitor the room temperature by switching to the thermistor at the remote controller side and/or the optional remote thermistor. Otherwise dew formation at air outlet port and/or dew dripping may occur during cooling operation due to the lower outdoor air temperature. Therefore keep the remote controller of this unit in place closer to the administrator so as not to be touched freely by the end user.
- (4) Dehumidifying operation with this unit is prohibited.
- (5) When handing over this unit to the end user, make sure to explain sufficiently about the foregoing cautions, the installation place and usage of remote control for this unit and the location of the air outlet.

Connectivity with Outdoor units

FDU-F series are connectable to 8~60HP KXZ outdoor units, not connectable to 4~6HP, KXZ Lite.

Combination with Outdoor units

	case	Combination
A	Only OA processing units are connected with outdoor units.	The total capacity of FDU-F is 50~100% of outdoor capacity and max quantity of FDU-F is 2 units.
B	Both of OA processing units and dedicated air conditioner are connected with outdoor units.	The total capacity of FDU-F and dedicated air conditioners is 50~100% of outdoor capacity and max quantity of FDU-F should be below 30% of outdoor unit capacity.

Concept (Difference between FDU-F and SAF)

SAF is the energy recovery ventilation unit which can recover heat energy from exhaust air to supply air and "has no air processing function, but FDU-F is an air processing unit which can treat the supply air closer to room temperature by cooling or heating in connection with KXZ refrigerant system and exhaust air is discharged to outside of the room.

FDU-F OA Processing units

SAF

RC-EX3H

What is the hydro module unit? (Hydro module unit = HMU)

This unit is an auxiliary device for use with the VRF type multi systems to control water temperatures.

It employs the plate heat exchanger in place of fin heat exchanger, and produces cold or hot water by exchanging heat between refrigerant and water.

Since it can produce hot or cold water using the VRF type multi systems as the heat source, it allows to configure a chiller system in a simple way on the one hand. On the other, it can expand the range of applications of air-conditioner because it can be used mixed with the multiple indoor unit for building.

Target outlet water temperature constant control

- This is achieved by controlling compressor frequency and control of EEVs.
- Controlling the capacity of HMUs in accordance with the load.
- The HMU is designed to achieve a hot water temperature of 55°C.

Mixed operation

- Mixed operation is possible in the air to air indoor unit and HMU.
- During the operation only of HMU, it can accommodate a wide range of outlet water temperature controlled by a dedicated control.
- When the system is in mixed operation, the HMU or air conditioner can be set as priority.

Antifreeze control

- Anti-freeze protection of plate heat exchanger is enabled.

External equipment linked

- External output of interlocking signal to an external heat source for the secondary heating.
- Possible target setting temperature change from the external input. (3 points)
- Water pump control (ON / OFF) possible.

*HMU is designed for closed loop heat exchange applications. Connections to any other open loop systems (such as domestic water) should be handled via a secondary heat exchanger.

Application example

Heating system using HMU and air conditioner propose various solutions.

- SAF-DX is a heating or cooling coil incorporating KXZ series controls. It can be used in combination with our total heat exchanger. (SAF series)
- Combination of SAF-DX with other indoor units is possible. The capacity code index of each model is shown below and must be used when making the system selection. Total capacity code index must be within 100% of outdoor unit capacity code index.
- Remote control option is the same as other indoor units (see above). Connection to all Superlink controls is also possible.
- Optional condensate lift mechanism is also available (600mm height).
- Return air temp. control or supply air temp. control can be selected.

SAF-DX can provide heating or cooling to the fresh air supplied through a 3rd party air handling unit or total heat exchanger such as our SAF series.

SAF1000E7

Energy Performance of Building Directive - EPBD

The EPBD function limits electrical/gas power to provide heating or cooling to commercial buildings. To use this function, the building designer needs to select energy efficient heating/cooling equipment and to minimise energy losses through ventilation systems.

SAF smart technology recovers heat energy in the atmosphere which would have otherwise been lost. It then uses this energy to warm air entering the building. The reverse happens in warmer climates where the exhausted cool air is used to partially cool the incoming air.

Increased external static pressure at UHi air flow

Helping you to reduce energy consumption and carbon emissions by capturing waste energy. EPBD also allows for smaller sized units as less heating/cooling requirements are needed!

Switch box (option)

Remote control

The following functions are newly available.

- ON/OFF Timer – The hour and minute of timer on/off can be set.
- Filter Sign – Announces the due time for cleaning the air filter.

Installation reference

Note: An inspection port is needed for cleaning the heat exchanger and filter 1 or 2 times a year.

EEV-KIT

- EEV-KIT is the control kit for operating the locally provided AHU or FCU with direct expansion heat exchanger coils in connection with the KXZ system.
(AHU : Air Handling Unit, FCU : Fan Coil Unit)
- EEV-KIT is composed of one EEV-Control ASSY and one EEV-Set.

Features

EEV-Control Assy has 2 types.

Refrigeration system	EEV-Control Assy	
	EEVKIT6-E-M	EEVKIT6-E-C
Single		1 box-Many boxes
Multiple	1 box (for master)	Many boxes(for slave)

EEV-Set Select from following 3 types according to the coil capacity.

Type	EEV6-71-E	EEV6-160-E	EEV6-280-E
Capacity	22-71	90-160	224-280

System configuration

- Single refrigeration system EEVKIT6-E-C ... Possible with multiple refrigeration systems
- Multiple refrigeration system EEVKIT6-E-M (1) + EEVKIT6-E-C ... Possible with multiple refrigeration systems(Max32)
- EEVKIT6-E-C is common for both single and multiple refrigeration systems

Single refrigerant system

- Single refrigeration system is the one that can have multiple outdoor units on one refrigerant pipe work circuit.
- There are 2 types of EEV-KIT systems that can be built into the single refrigeration system.
- System A : one EEV-KIT.
- System B : multiple EEV-KIT's.

System A

- This system has only one set of EEV-KIT built into one indoor unit with only one heat exchanger. This system can be applied to an indoor unit whose capacity is up to 10HP.

System B

- System B is a system that has multiple EEV-KIT's built into one indoor unit with multiple heat exchangers on one refrigerant circuit.
- This system can be applied up to 60HP (for KXZ) AHU capacity.

Multiple refrigerant system

Multiple refrigeration system is an AHU system with multiple independent refrigerant circuits and one master control to control the whole system.

Advantages

- Large systems are possible [max capacity 896kW]
- External control
- Capacity step control
- Can connect to 32 units

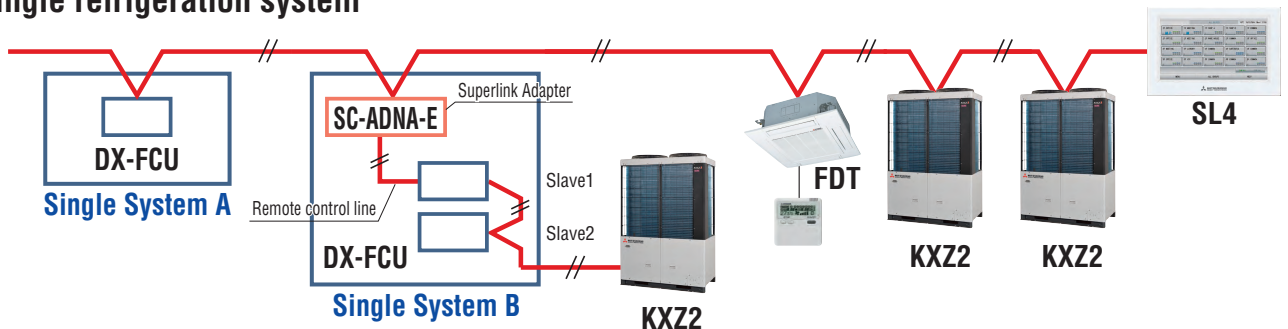

Additional parts over a single refrigeration system

- One master control
- The slave EEV control and EEV set are the same as a single refrigeration system.

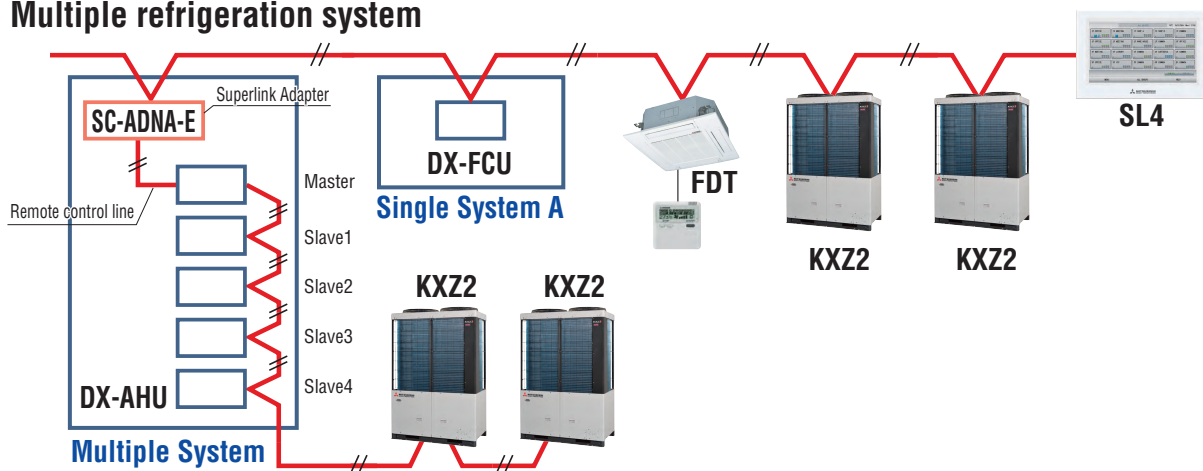

Connection to SUPERLINK II

Single refrigeration system

Multiple refrigeration system

Wired remote control (option)

RC-EX3A

Intuitive touch controller with Liquid Crystal Display

User friendly

- LCD panel with light tap operation introduced as the industry's first
- Simple interface with only three buttons

Easy view

- Big LCD with 3.8 inch full dot display
- Back light function
- Multi language display (12 languages)

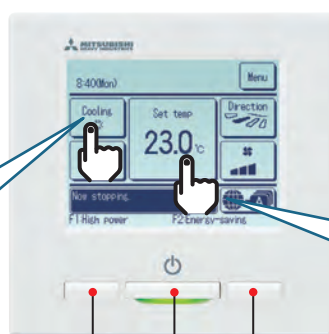

Operation mode

Operation mode setting screen

The desired operation mode can be selected by simply tapping this button.

Run / Stop

Setting temperature screen

You can select the temperature as desired by tapping Δ ∇ button.

High power operation

The highest capacity operation (Max 15 minutes)

- Increasing compressor speed
- Increasing air flow volume

Energy-saving operation

- Changes set temperature.

At 28°C in cooling mode and 22°C in heating mode, 25°C in auto mode.

- Operation correction by outdoor temperature

Main functions

	Function name	Description
Economy & Timer	Energy-saving operation	Since the capacity is controlled automatically based on the outdoor temperature, energy can be saved without losing comfort.
	Sleep timer	Set the time period from start to stop of operation. The selectable range of setting time is from 30 to 240 minutes (at 10-minute intervals).
	Set temperature auto return	The temperature automatically returns to the previously set temperature.
	Set ON timer by hour	When the set time elapses, the air conditioner starts.
	Set OFF timer by hour	When the set time elapses, the air conditioner stops.
	Set ON timer by clock	The air conditioner starts at the set time.
	Set OFF timer by clock	The air conditioner stops at the set time.
	Weekly timer	On or Off timer can be set on a weekly basis.
	Peak-cut timer	Capacity control can be set by using peak cut function on RC-EX3A for better energy saving. Five-step capacity control is available.
	Home leave operation	When the unit is not used for a long period of time, the room temperature is maintained at a moderate level, avoiding extremely hot or cool temperatures.
Comfort	Big LCD & Touch screen panel	Large 3.8 inch screen has resulted in improved visibility and operability.
	Easy modification of Individual flap control	User can visually confirm and set the direction of flaps using the visual display on the remote controller.
	Automatic fan speed *1	The micro-computer automatically adjusts the airflow effectively to follow the changes of return air temperature.
	Temp increment setting	Temperature increment for the change of the set temp can be changed.
Convenience	Silent mode	Set the period of time to operate the Outdoor unit with prioritizing the quietness.
	Function switch	The function switch allows user to select and set two functions among available functions.
	Favorite setting	Operation mode, set temperature, fan speed and air flow direction automatically adjust to the programmed favorite setting.
	Adjusting Brightness of the background light	The brightness of the background light can be adjusted by 10 stages.
	LCD contrast setting	This function allows user to adjust LCD display contrast.
	High power operation	High Power Mode increases the unit operating ability for 15 minutes to quickly adjust the room temperature to a comfortable level.
	Back light setting	This convenient function allows user to see controls under low light conditions.
	Administrator settings	This function only allows specific individuals to operate the unit.
	Setting temp range	Limited range of setting temperature in the heating or the cooling operation can be selected.
	External Input/Output Function	The external input/output of indoor unit by remote controller can set input/output based on user needs.
Service	Select the language	Set the language to be displayed on the remote control.
	USB connection (mini-B)	This function allows batch input of schedule timer settings and other settings involving a large amount of data.
	Error code display	This function allows user to check information displayed when abnormal function of the unit occurs.
	Operation data display	Displays various types of air conditioner operation data in real time.
	Contact company display	Address of the service contact is displayed.
	Filter sign	Announces the due time for cleaning of the air filter.
	Static pressure adjustment	Allows user to adjust duct static pressure using the remote control.
	Backup Control	Allows for rotation control, fault backup control, and capacity backup control.

*1 Cannot be used when a centralized control remote is connected.

Wireless remote control (option)

For wireless control simply insert the infra-red receiver kit on a corner of the panel

RCN-T-5BW-E2
RCN-T-5BB-E2

RCN-TC-5AW-E3

RCN-TW-E2

RCN-TS-E2

RCN-K-E2,
RCN-K71-E2

RCN-E-E3

RCN-FW-E2

RCN-KIT4-E2

*The wireless remote control is not applicable to the Individual flap control system.

Wired remote control (option)

RC-E5

The RC-E5 controller enables extensive access to service and maintenance technical data combined with easy to use functions and a clear LCD display.

Weekly timer function as standard

RC-E5 provides (as a standard feature) a weekly timer, which allows one-week operation schedules to be registered. A user can specify up to four times a day to start/stop the air conditioner. (Temperature setting is also possible with the timer).

Timer operation

Run hour meters to facilitate maintenance checking

RC-E5 stores operation data when an anomaly occurs and indicates the error on the LCD. It also displays cumulative operation hours of the air conditioner and compressor since commissioning.

Room temperature controlled by the remote control sensor

The temperature sensor is housed in the top section of the remote control unit. This arrangement has improved the sensitivity of the remote control unit's sensor, which permits more finely controlled air conditioning.

Changeable set temperature ranges

RC-E5 allows the upper and lower limits of a set temperature range to be specified separately.

By adjusting a set temperature range, you can ensure energy saving air conditioning by avoiding excessive cooling or heating.

Changeable range	
Upper limit	20~30°C(effective for heating operation)
Lower limit	18~26°C(effective for non-heating operation)

Simple remote control (option)

RCH-E3 (wired)

Designed specially for hotel rooms, the controller's buttons are limited only to the minimum required functions such as ON/OFF, mode, temperature setting and fan speed. It is really simple and easy to use.

Up to 16 units

It can control up to 16 indoor units, by pressing the AIR CON No. button.

AUTO restart

This function allows starting the air conditioner automatically when power supply is restored after power failure or by turning on the power switch.

* RCH-E3 is not applicable to the Individual flap control system.

* When RCH-E3 is used, the fan speed setting can only be set to 3 speed settings (Hi-Me-Lo).

Thermistor (option)

SC-THB-E3

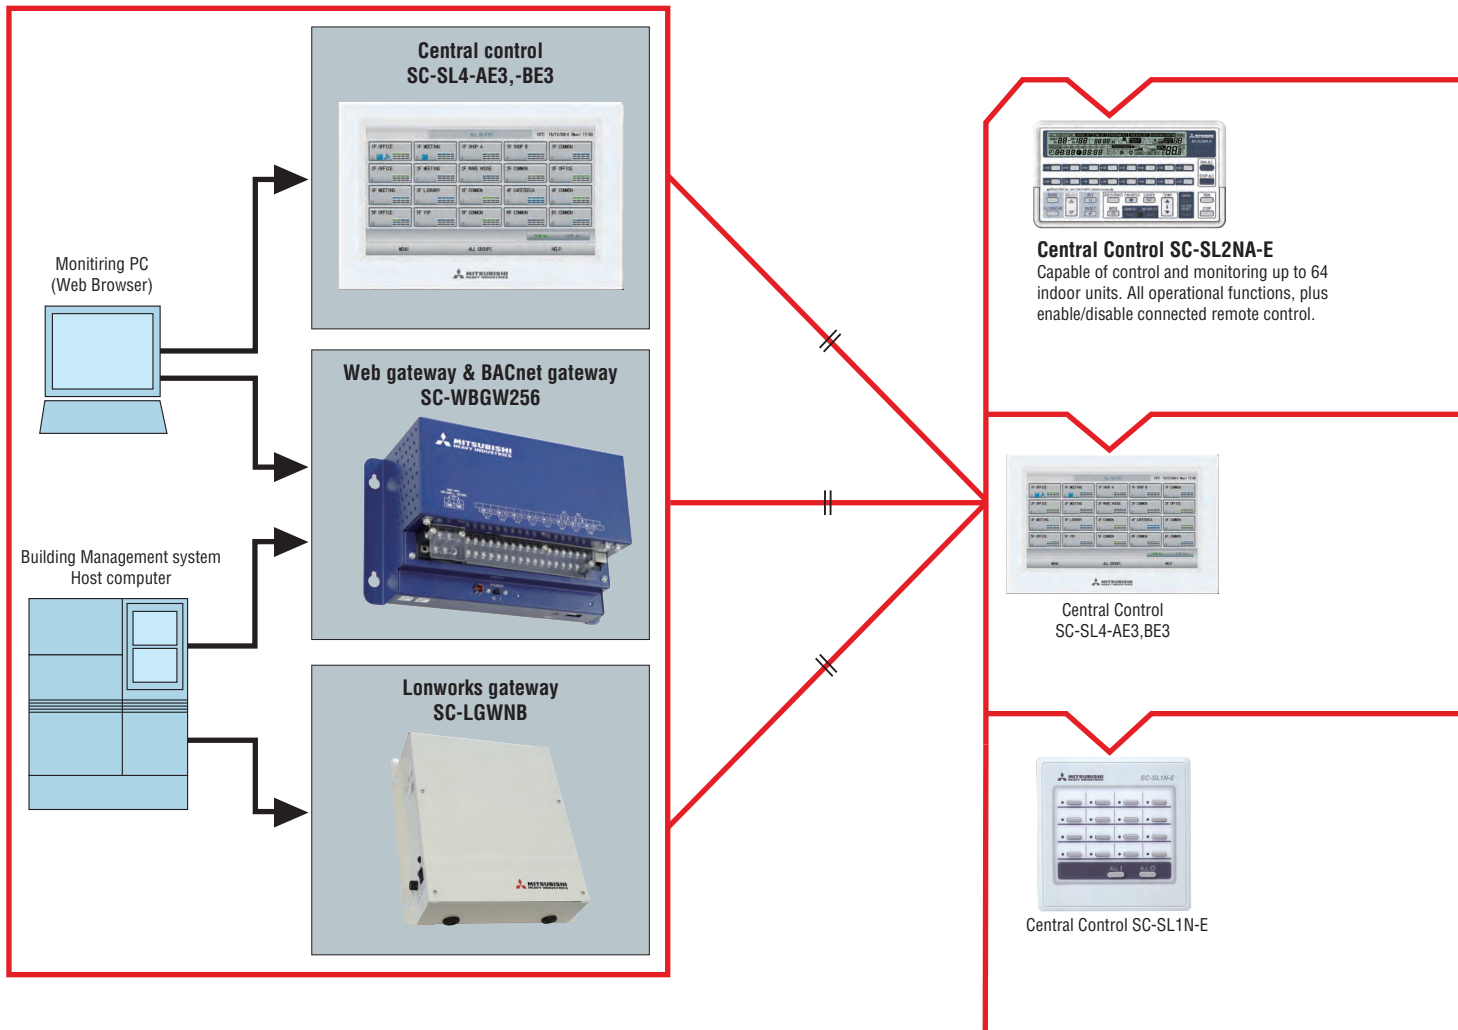

In case the sensor integrated in the indoor unit or in the remote controller is unable to sense the room temperature correctly, or an individual controller in each room is not required but a temperature sensor is (as when a central control system is in place), install SC-THB-E3 in an adequate location in the room.

8m

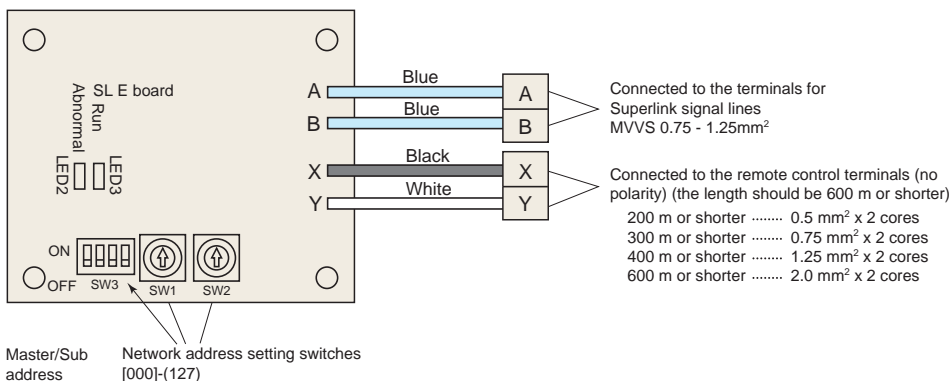

SUPERLINK® - II Control System

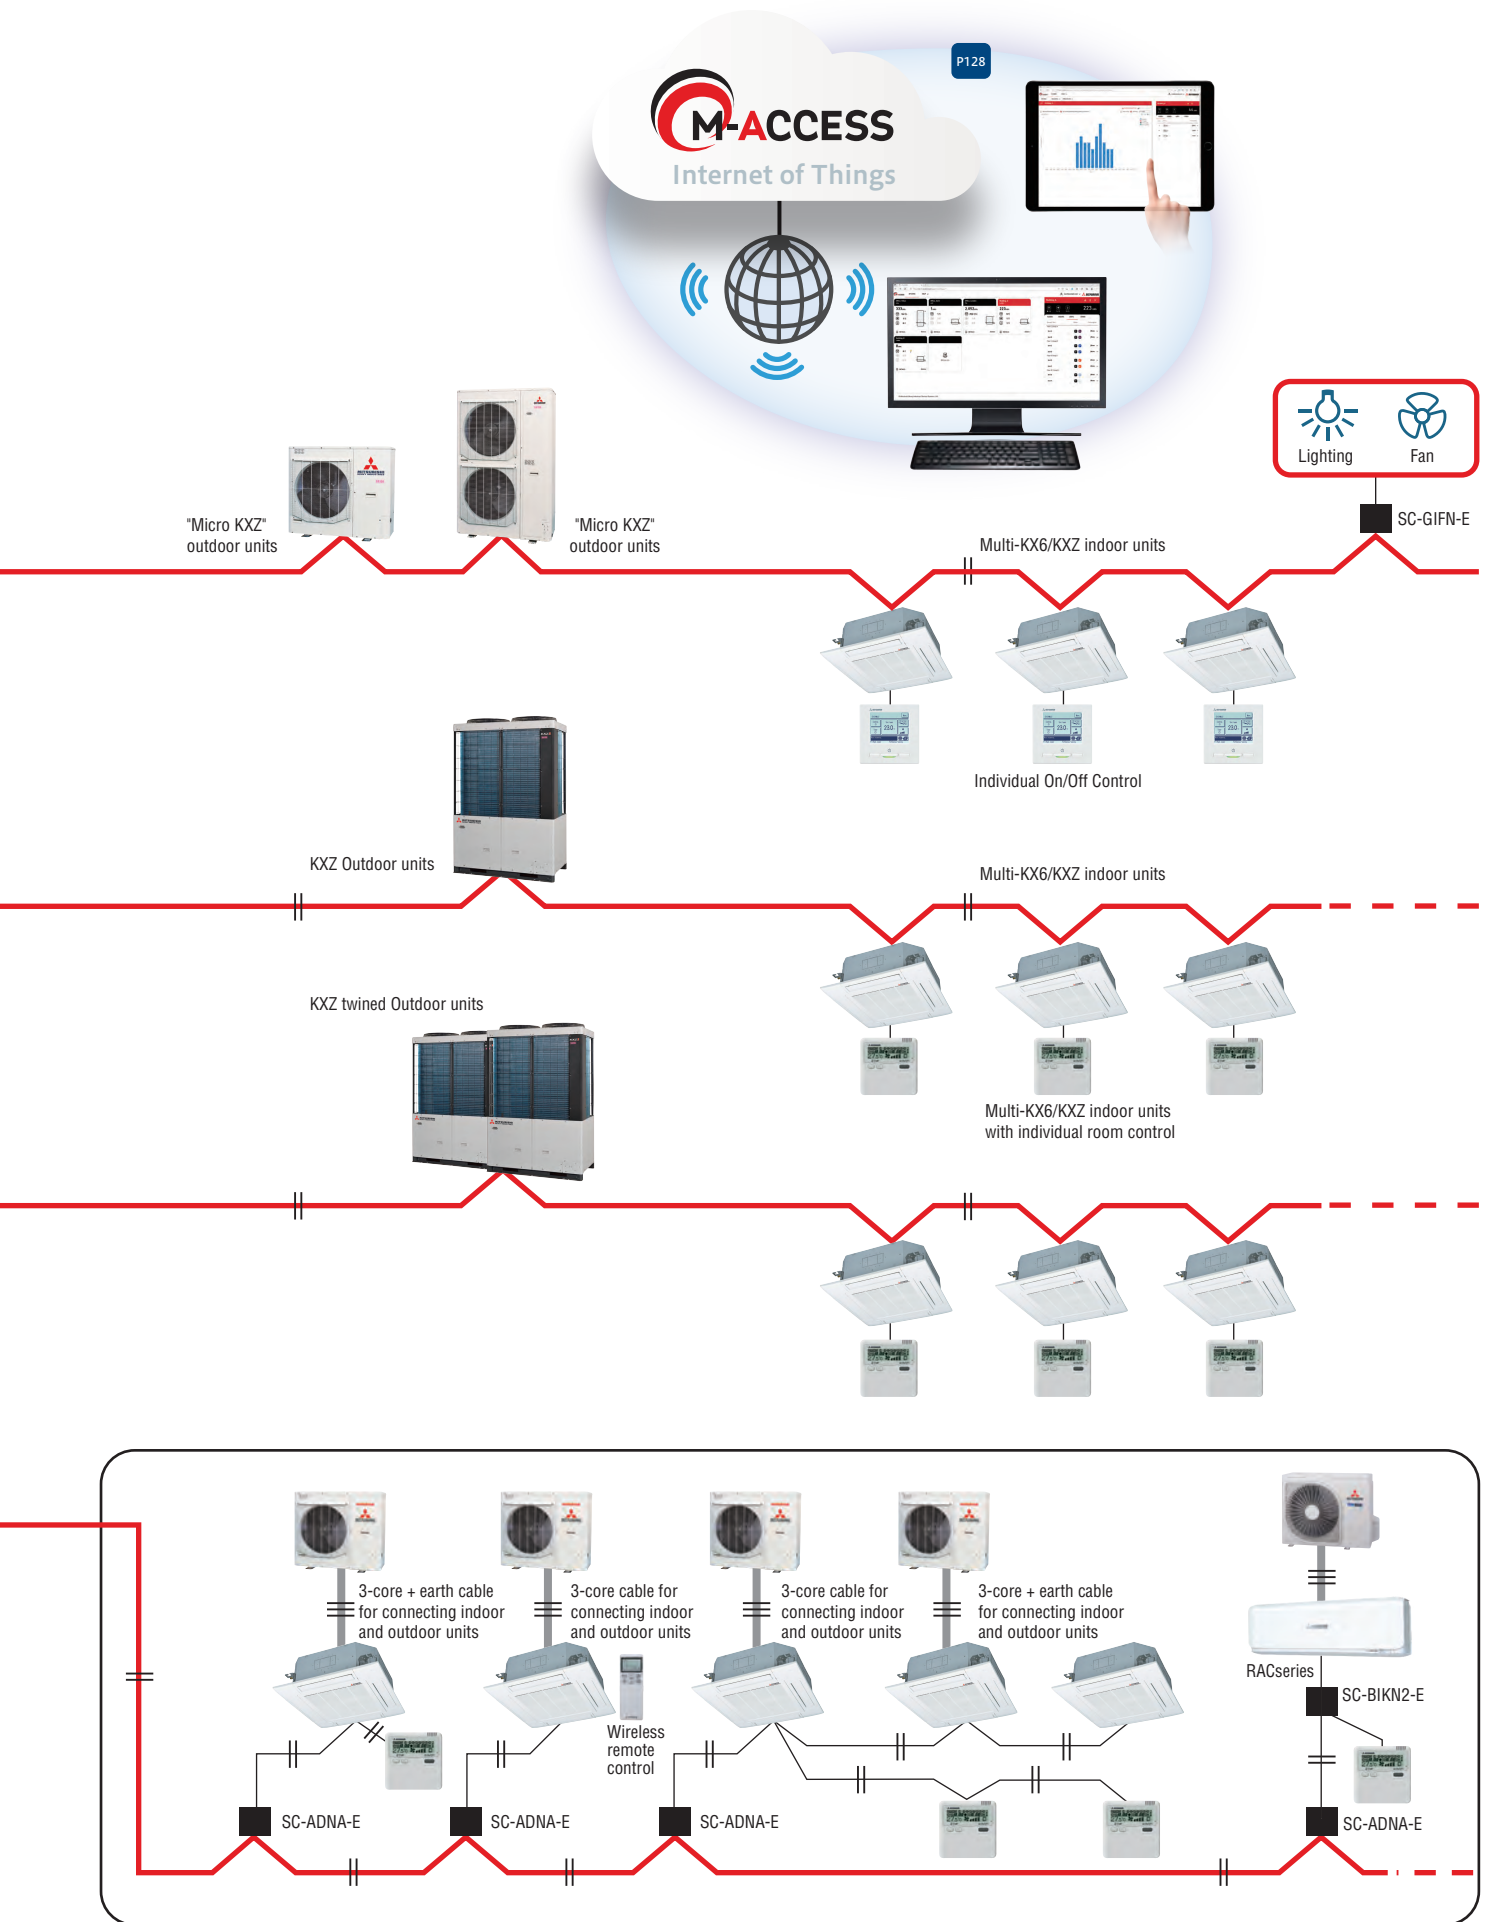

Mitsubishi Heavy Industries Thermal Systems has now combined simplicity of installation with our highly sophisticated SUPERLINK - II control system, to offer building owners and occupiers a comprehensive control and management system, while providing complete commissioning and service maintenance assistance for installers and service engineers. SUPERLINK - II network utilises two wire, non-polar cable - for further details of wiring. SUPERLINK - II is an advanced high speed data transmission system that can connect up to 128 indoor units and 32 outdoor units as a network. Mitsubishi Heavy Industries Thermal Systems offers a wide range of control options for the SUPERLINK - II network to suit any application large or small, as well as connection to new or existing building management systems. Individual Mitsubishi Heavy Industries Thermal Systems split systems can also be integrated on to the SUPERLINK - II network using SC-ADNA-E.

SUPERLINK E BOARD(SC-ADNA-E)

This board is used when conducting control of the single package (wired remote control unit) 1-type series using a network option.

IoT Remote monitoring system

The Cloud system M-access can remotely control the air conditioning units by using IoT technology.

With 3 different functions the system supports the operation and management from both the software and hardware.

RM-CGW-E1

H140 × W260 × D93mm

1 Diverse connectivity

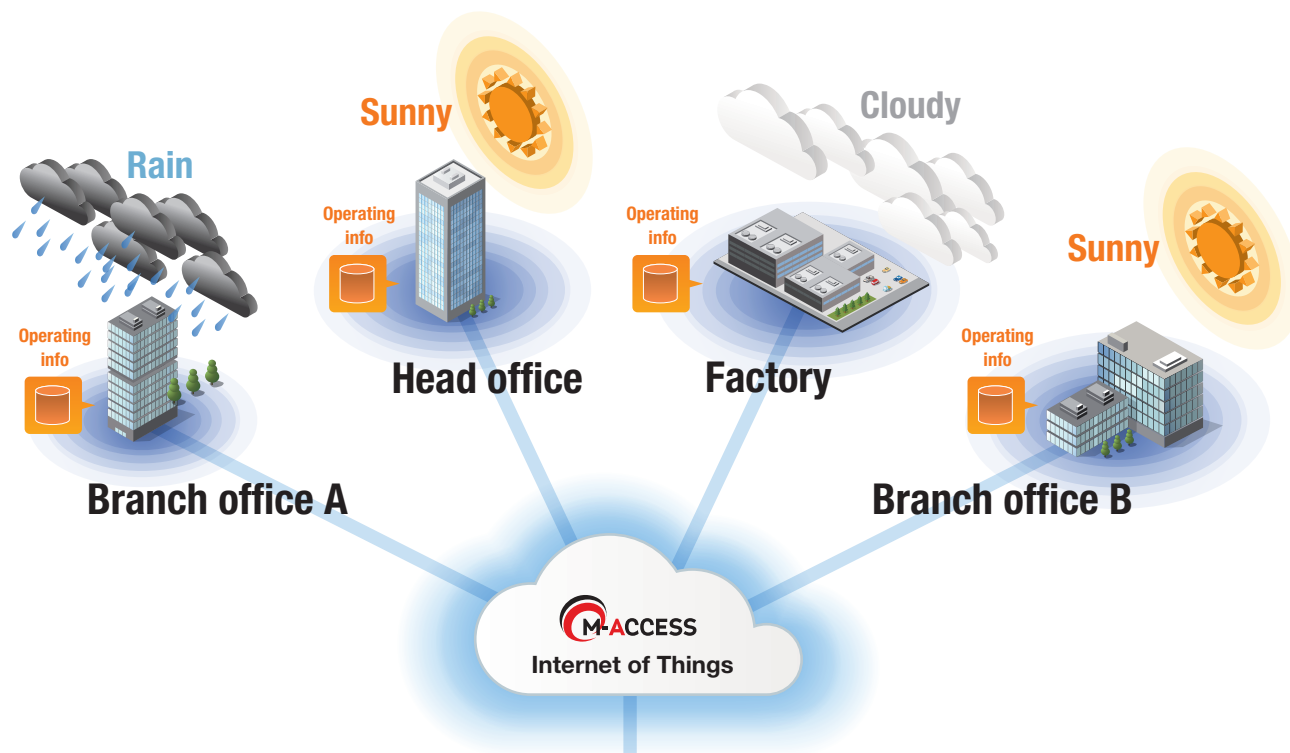

The system could be connected to a wide range of units.

2 Could monitor and control the units in various locations

Could monitor the conditions of the air conditioning units in remote locations in real time.

3 Error notifications

When detecting malfunction an alert is sent to the user by E-mail. Could register multiple users for the sending address.

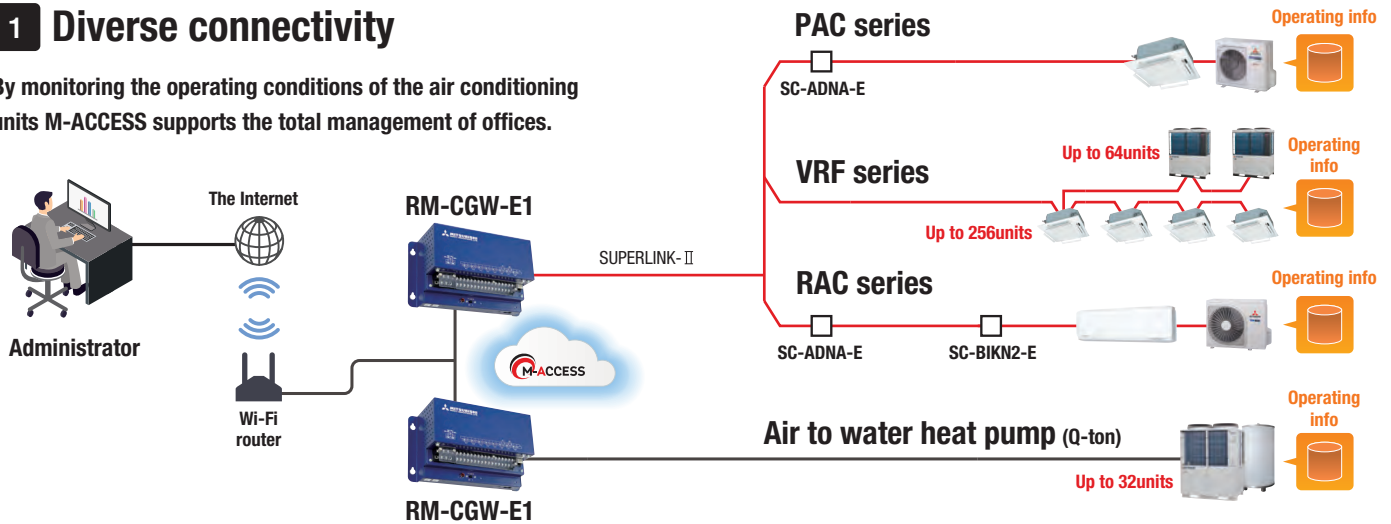

From PC and tablets

The photos of the devices are an image

1 Diverse connectivity

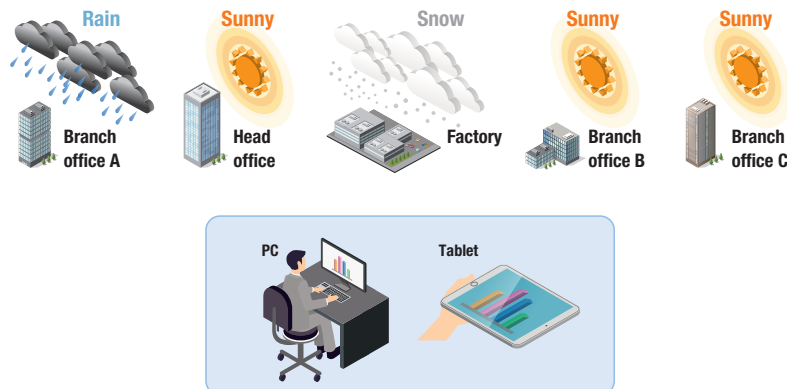

By monitoring the operating conditions of the air conditioning units M-ACCESS supports the total management of offices.

2 Could monitor and control the units in various locations

Could know the real time operating conditions of the units in different locations.
Could simultaneously manage up to 128 different locations.

Example controlling 5 different locations with one device

1 Improving the operation and making the life cycle of units better

Could remotely activate/deactivate or change the setting temperature by looking at the weather conditions of various locations.

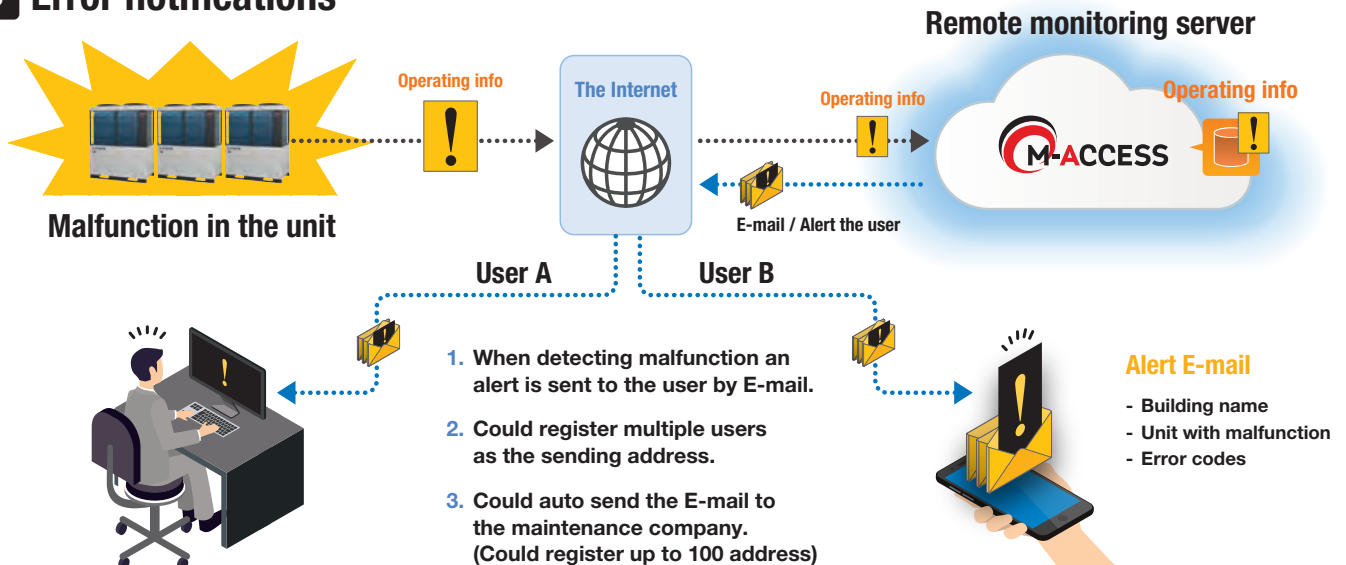

2 Making Efficient operation possible with connection to the various units

Operating the units with optimized combination

Could connect to VRFs, Packaged inverter units and Residential AC.

3 Error notifications

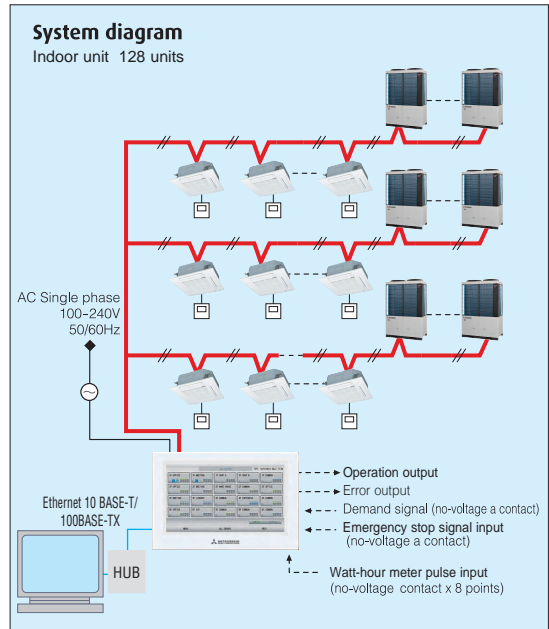

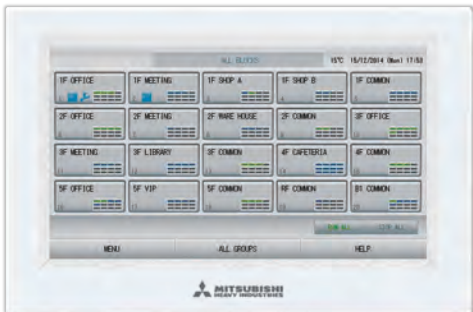

Central Control SC-SL4-AE3,BE3

Mitsubishi Heavy Industries Thermal Systems introduces the full colour touch screen central control SC-SL4-AE3,BE3, with 9 inch interactive LCD display. Offers control, monitoring, scheduling and service/maintenance functions for up to 128 indoor units.

Control with PC is available by use of Microsoft Edge/Google chrome.

Indoor units can be controlled, scheduled, monitored and either individually, as groups or as blocks of groups with the following functions:

Control	Monitoring	Scheduling	Administration/Service
Run/Stop / Home leave	Operating state	Yearly schedule	Block definition, Floor layout
Mode (cool/heat/fan/dry/Auto)	Mode	Today's schedule	Group definition
Set temperature	Set temperature	Detailed daily schedule	Unit definition
Operation permitted/prohibited	Room temperature	Season setting	Time and date setting
Fan speeds	Operation permitted/prohibited		Alarm history
Air direction	Fan speed		Energy consumption calculation period
Filter sign reset	Air direction		Energy consumption, cumulative operation time
Demand control (3 steps)	Filter sign		Flap control setting
Emergency stop	Maintenance (1, 2 or back-up) Outdoor air temperature		Operation data monitoring Data logging (Run / Stop set temperature , room temperature , outdoor air temperature)

PC requirements: Windows 10, Windows 11
Monitor resolution 1280 x 1024 or more.
Web browser requirements: Microsoft Edge , Google Chrome

Schedule setting

For each group

Schedule settings for each group are possible. The RUN/STOP/HOME LEAVE time, operation mode, remote control Lock/Unlock setting, temperature setting, energy setting, and silent mode can be set up to 16 times per day.

Yearly Schedule

Schedule settings for a year are also possible. The weekday, holiday, special day 1 or special day 2 can be selected and set. Able to automatically update the yearly schedule.

Operation time history

Possible to check operation time history for cooling and heating separately.

Alarm history

A maximum of 300 records is displayed for the history of error occurrence and restoration in the unit of air conditioner. It is possible to output the history data to a CSV data file.

Maintenance code

Able to show the maintenance code

Improved visibility

Compared to the old model the visible angle of the LCD has expanded and the visibility has improved.

High visibility

Increase in size from 7 to 9 inches

Contrast between five colours for icon display and black light base screen has achieved high visibility.

Models that can be connected has increased

Can now connect to Q-ton/ HMU. Can have easy centralized control over various modes

*When connecting to Q-ton, an interface(RCI-MDQE2) is necessary.

Import of floor layout is possible.
(JPEG)

Possible to move Group icon to any place in imported layout.

You can monitor and control up to 128 indoor units (Max.128 groups) from a PC or tablet PC.

Monitoring and operating air conditioners in a lecture room of a university

With the new demand control, temperature shifts between 1~9°C (Cooling or Drying ;1~9°C, Heating: -1~-9°C), fan mode can be selected.

(for SC-SL4-BE3 only)

SC-SL4-BE3 gives electric power consumption data (kWh) for each indoor unit, each group, each SUPERLINK-II system, and each watt-hour meter input.

	SC-SL4-BE3
Export data by	USB / LAN
Calculation software	Included
Watt-hour meter pulse input (Maximum)	8
Max connectable indoor units	128

Item	Model	SC-SL4-AE3/SC-SL4-BE3
Ambient temperature during use		0 ~ 40°C
Power supply		1 Phase 100-240V 50/60Hz
Power consumption		9W
External dimensions (Height x Width x Depth)		172mm x 260mm x 23 (+70) mm
Net weight		2.0kg
Number of connectable units (indoor units)		up to 128 units
LCD touch panel		Colour LCD, 9 inches wide
Inputs	SL (Superlink) signal inputs	1 system (Super link-II)
	Watt-hour meter pulse input*	8-point, pulse width 80ms or more
	Emergency stop signal input*	1 point, non-voltage a contact input continuous input (closed, forced stop)
	Demand signal input*	2 point, non-voltage a contact input continuous input (closed, demand control)
Outputs	Operation output	1 point, maximum rated current 40mA, DC24 V All units stop; Open, any unit operating;Close
	Error output	1 point maximum rated current 40mA, DC24 V Normal; closed. If even one unit is abnormal; Open (Open/closed can be changed)

* The receiving side power supply is DC 12V (10mA).

The air conditioning charges calculations of this unit are not based on OIML, the international standard.

SC-SL1N-E

Start/stop control of up to 16 indoor units either individually or collectively.

Simple centralised control.

1. The SC-SL1N-E is connected to the Superlink-II network via 2-core, non-polar wires ('AB' connection).
2. It will monitor and control the start/stop function of up to 16 units, with the sixteen operation button.
3. The unit or group numbers in operation or in need of service are displayed with an LED.
4. Collective start/stop is also available through the simultaneous on/off button.
5. Up to 12 SC-SL1N-E units can be connected to a Superlink-II network (consisting of up to 128 indoor units).
6. If a power failure occurs, the SC-SL1N-E will resume the operation of the system according to a stored operation condition, once power is restored.

SC-SL2NA-E

Central control of up to 64 indoor units including weekly timer function as standard.

1. The SC-SL2NA-E is connected to the Superlink-II network via 2-core, non-polar wires ('AB' connection).
2. It will monitor and control the start/stop function of up to 16 units, or 16 groups of units, with the sixteen operation buttons.
3. It also monitors and controls the following functions for individual units, groups of units or the complete network: operation mode, set point temperature, return air temperature, louvre position, error code. Air flow and center lock function.
4. The unit or group numbers in operation or in need of service are displayed with an LCD.
5. Collective start/stop is also available through the simultaneous on/off button.
6. If a power failure occurs, the SC-SL2NA-E will resume the operation of the system according to a stored operation condition, once power is restored.
7. The SC-SL2NA-E can be connected to an external timer to facilitate timed on/off cycles.

Example of control by a center control SC-SL2NA-E

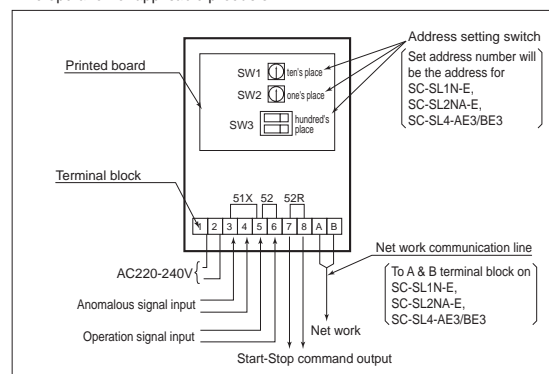

An SC-SL2NA-E performs the start/stop control, monitoring and mode setting of up to 64 units. It is a high quality air conditioner control system that allows up to 64 indoor units to be freely grouped into 1 to 16 groups. It allows not only the start/stop control but also the monitoring, display of operation statuses such as in operation or in need of service and mode setting such as switching of operation modes of connected units collectively, by group or individually.

- Outer dimensions: H120 x W215 x D25+35* mm.
- 35* is the measurement including the part contained in a recess.

SC-GIFN-E Interface kit

- Applicable products
Ventilation fan, Air purifier
- By using SC-GIFN-E together with central control such as SC-SL1N-E, SC-SL2NA-E and SC-SL4-AE3,-BE3, you can start-stop, operate & monitor the operation of applicable products.

Note: Please consult dealer for combination of center controls and Building Management Systems interface units.

Building Management Systems

SC-WBGW256 (Web gateway+BACnet gateway)

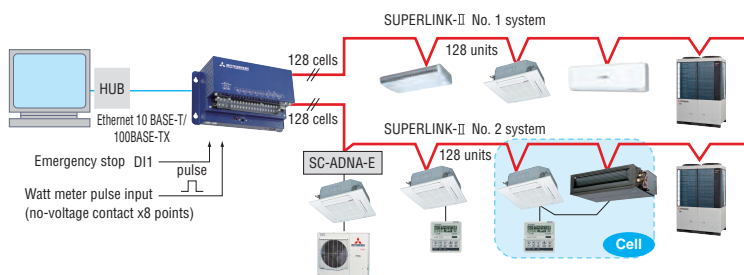

Production by order

SC-WBGW256 controls and monitors of up to 256 cells (some cells can have two or more indoor units and total number of indoor units can be up to 256 units) centralised to a network PC using the Superlink-II web gateway. Simple installation is assured with no special software requirements, operation is via web browser. A low power embedded CPU and compact flash ROM ensure a large storage capacity with high reliability (no moving parts such as a PC fan, etc). An IP address filter function combined with three-level user authentication check also ensures security.

Also, SC-WBGW256 can be used as interface devices that convert Mitsubishi Heavy Industries Superlink-II communication data to BACnet code and are controlled centrally from a building management system.

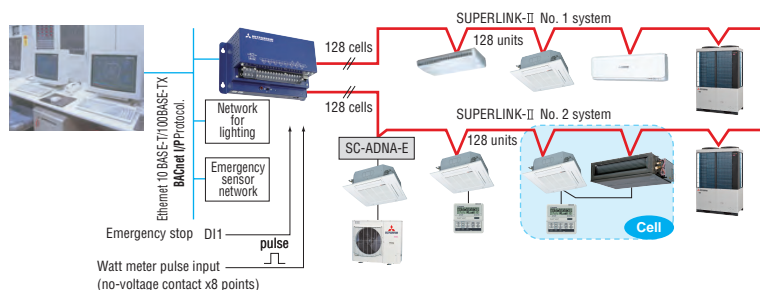

[In case of web gateway]

PC requirements: Windows 7 or Windows 8.1.
Monitor resolution 1364 x 768.

[In case of BACnet gateway]

Users can manage up to 1024 units by connecting the four devices!!

Up to 4 WBGW256 can be handled by 1 Internet Explorer Screen (max. 256x4=1024 units)

SC-LGWNB (LonWorks gateway)

Production by order

SC-LGWNB is an interface device that converts Mitsubishi Heavy Industries Superlink-II communication data to LonWorks code. Control and monitoring functions of the a/c system for up to 96 indoor units can be integrated to a central control point via the building management system.

Additional engineering service cost etc. is required.
Please consult your dealer when using this gateway.

INTESIS BMS Interface for Mitsubishi Heavy Industries Thermal Systems Air Conditioners

All technical support, including specifying work, compatibility issues, product quality (repair and replacement issues), product liability issues and the required after sales service (including spare parts supply) will be provided by Intesis as it is an Intesis product.

Product sales and delivery will be conducted by Intesis as well.

For details concerning such matters please directly contact Intesis.

Integration of Mitsubishi Heavy Industries Thermal Systems VRF in your KNX installation by Superlink

INKNXMH10480000

(Max 48 indoor units / Superlink I & II)

INKNXMH11280000

(Max 128 indoor units / Superlink II)

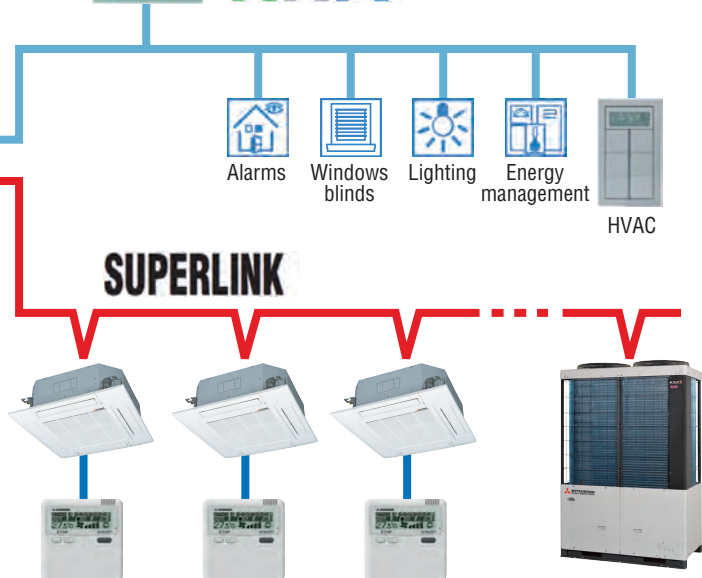

Intesis
BY HMS NETWORKS

TOUCH SCREEN

INTEGRATED GATEWAY

- Bidirectional: Supervision and Control
- Robust and reliable hardware
- Direct connection to KNX TP-1 BUS
- Independent management of communications
- Power supply: 230 VAC 50/60Hz
- Wall mounting case

Integration of Mitsubishi Heavy Industries Thermal Systems VRF in your Modbus installation by Superlink

INMBSMH10480000

(Max 48 indoor units / Superlink I & II)

INMBSMH11280000

(Max 128 indoor units / Superlink II)

MODBUS

INTEGRATED GATEWAY

- Bidirectional: Supervision and Control
- Robust and reliable hardware
- Modbus TCP or Modbus RTU RS-485/RS-232
- Independent management of communications
- Power supply: 230 VAC 50/60Hz
- Wall mounting case

Integration of Mitsubishi Heavy Industries Thermal Systems PAC in your KNX installation by Remote control line

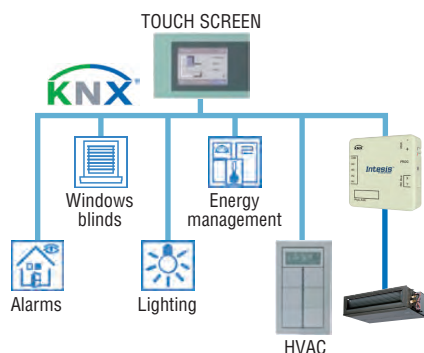

INKNXMH001R000

Intesis
BY HMS NETWORKS

- Protocol : KNX TP-1 bus
- Dimension : 71 x 71 x 27 mm
- External Power supply : no need

Example : Device as Master

Example : Device as Slave

Integration of Mitsubishi Heavy Industries Thermal Systems PAC in your Modbus installation by Remote control line

INMBSMH001R000

Intesis
BY HMS NETWORKS

- Protocol : Modbus RTU (RS-485)
- Dimension : 93 x 53 x 58 mm
- External Power supply : no need

Example : Device as Master

Example : Device as Slave

AC Cloud Control

PAC Model: INWMPMH001R000

Please access the followings for details.

Energy efficient and environmentally conscious

Several radical design changes and engineering developments have brought about a vast improvement in energy efficiency and environmental protection.

SEER and SCOP is defined in European regulations listed below.

No.2016/228 1: requirement for air-heating products, cooling products, high temperature process chillers and fan coil units. Seasonal efficiency is the new way of rating the true efficiency of heating and cooling products over an entire year. Set by the EU's new regulation implementing Eco-Design Directive for Energy related Product (ErP) which specifies the minimum efficiency of air conditioners manufacturers must integrate into their products.

The new Seasonal Efficiency rating system that must be used for heating and cooling by all manufacturers are;

SEER - Seasonal Efficiency Ratio (value in cooling)

This ratio represents the annual cooling performance divided by the annual consumption of electricity for cooling.

SCOP - Seasonal Coefficient of Performance (value in heating)

This ratio is calculated as the divided reference annual heating performance by the annual consumption of electricity for heating.

All models meet the performance required by LOT6/21.

RoHS: Restriction of Hazardous substances

In order to avoid the release of hazardous substances into the environment, all models have utilized lead-free solder application. It has been considered to be difficult to use lead-free solder for practical applications because it requires higher solder temperatures at assembly, which can jeopardize reliability. However our PbF soldering method can produce a higher quality lead-free printed circuit board.

Employment of

All models use refrigerant R32 or R410A characterized by the ozone depletion coefficient being 0.

Excellent Energy Saving

High performance and excellent energy savings are achieved at the same time by the increased capacity of the heat exchanger and employment of high efficiency DC motor.

Outdoor unit	FDC121KXZEN1 -W	FDC121KXZES1 -W	FDC140KXZEN1 -W	FDC140KXZES1 -W	FDC155KXZEN1 -W	FDC155KXZES1 -W
SEER / SCOP (Outdoor unit)	9.67 / 4.67	9.67 / 4.67	8.82 / 4.62	8.82 / 4.62	8.17 / 4.58	8.17 / 4.58

Outdoor unit	FDC121KXZEN1	FDC121KXZES1	FDC140KXZEN1	FDC140KXZES1	FDC155KXZEN1	FDC155KXZES1
SEER / SCOP (Outdoor unit)	8.15 / 4.63	8.15 / 4.63	7.73 / 4.59	7.73 / 4.59	7.21 / 4.55	7.21 / 4.55

Outdoor unit	FDC224KXZME1	FDC280KXZME1	FDC335KXZME1A	FDC224KXZPE1	FDC280KXZPE1
SEER / SCOP (Outdoor unit)	6.55 / 4.55	6.03 / 4.54	5.84 / 4.04	6.65 / 4.34	6.68 / 4.50

SEER / SCOP (Outdoor unit)	6.21 / 4.06	6.36 / 4.02	7.15 / 4.43	6.78 / 4.39	6.29 / 4.33	6.60 / 4.27	7.01 / 4.39

Outdoor unit	FDC560KXZRE2	FDC615KXZRE2	FDC670KXZRE2
SEER / SCOP (Outdoor unit)	6.26 / 4.29	6.05 / 4.34	5.88 / 4.50

• refrigerant contained in the products is a fluorinated greenhouse gas listed in Regulation (EU) No 517/2014.

• SEER/SCOP are based on EN14825:2016 and Commission regulation (EU) No.2016/2281. Temperature conditions for calculating SCOP are based on "Average climate".

• The above values are combination with Ceiling casse the 4way unit.

NOTES

[illegible]

Before starting use

Heating performance

The heating performance values (kW) described in the catalogue are the values obtained by operating at an outdoor temperature of 7°C and indoor temperature of 20°C as set forth in the ISO Standards. Heating performance is reduced as the temperature drops. If the outdoor temperature is too low and the heating performance is insufficient, use other heating appliances as well.

Indication of sound values

The sound values are the values (A scale) measured in a chamber such as an anechoic chamber following the ISO Standards. In the actual installation state, the value is normally larger than the values given in the catalogue due to the effect of surrounding noise and echo. Take this into consideration when installing.

Use in oil atmosphere

Avoid installing this unit in an atmosphere where oil scatters or builds up, such as in a kitchen or machine factory.

If the oil adheres to the heat exchanger, the heat exchanging performance will drop, mist may be generated, and the synthetic resin parts may deform and break.

Use in acidic or alkaline atmosphere

If this unit is used in acidic atmosphere such as hot spring areas having high level of sulfuric gases or in alkaline atmosphere including ammonia or calcium chloride, places where the exhaust of the heat exchanger is sucked in, or at coastal areas where the unit is subject to salt breezes, the outer plate or heat exchanger, etc., will corrode. Please ask a dealer or specialist when you use an air conditioner in places differing from a general atmosphere.

Use in places with high ceilings

If the ceiling is high, install a circulator to improve the heat and air flow distribution when heating.

Refrigerant leakage

The refrigerant (R32, R410A) used for air conditioner is non-toxic and in its original state.

However, in consideration of a state where the refrigerant leaks into the room, measures against refrigerant leaks must be taken in small rooms where the tolerable level could be exceeded. Take measures by installing ventilation devices, etc.

Use in snowy areas

Take the following measures when installing the outdoor unit in snowy areas.

·Snow prevention

Install a snow-prevention hood so that the snow does not obstruct the air intake port or enter and freeze in the outdoor unit.

·Snow piling

In areas with heavy snow fall, the piled snow could block the air intake port. In this case, a frame that is 50cm or higher than the estimated snow fall must be installed underneath the outdoor unit.

Automatic defrosting device

If the temperature is low, and the humidity is high, frost will stick to the heat exchanger of the outdoor unit. If continued to use, the heating performance will drop.

The "Automatic defrosting device" will function to remove this frost.

After heating for approx. three to ten minutes, it will stop, and the frost will be removed. After defrosting, hot air will be blown again.

Servicing

After the air conditioner has been used for several seasons, dirt will build up in the air conditioner causing the performance to drop. In addition to regular servicing, a maintenance contract by a specialist is recommended.

Safety Precautions

Air conditioner usage target

The air conditioner described in this catalogue is a dedicated cooling/ heating device for human use.

Do not use it for special applications such as the storage of food items, animals or plants, precision devices or valuable art, etc.

This could cause the quality of the items to drop, etc.

Do not use this for cooling vehicles or ships. Water leakage or current leaks could occur.

Before use

Always read the "User's Manual" thoroughly before starting use.

Installation

Always commission the installation to a dealer or specialist. Improper installation will lead to water leakage, electric shocks and fires.

Make sure that the outdoor unit is stable in installation. Fix the unit to stable base.

Usage place

Do not install in places where combustible gas could leak or where there are sparks.

Installation in a place where combustible gas could be generated, flow or accumulate, or places containing carbon fibers could lead to fires.

Mitsubishi Heavy Industries Thermal Systems, Ltd.

(Wholly-owned subsidiary of MITSUBISHI HEAVY INDUSTRIES, LTD.)
